Features

- Higher cost-efficiency compared to servo motor drivers
- Alarm/Status display part (7-segment)
- Rapid response which is advantageous for the short distance continuous operation
- Able to implement Low frequency operation and high torque in low speed area
- Low current drive at middle high speed area
- Max. stop torque at current down mode (available vertical load attaching)
- Easy to use as much as unskilled people can use with tuning unnecessary method (Gain setting with the switch)
- Applicable to the precision equipment such as optical inspection equipment with the features of maintaining torque in stop and having no micro vibration (hunting)
- Various resolutions
 - : 500, 1000, 1600, 2000, 3200, 3600, 5000, 6400, 7200, 10000 (10 steps)
- Various alarms output
 - : overcurrent, overspeed, motor connection error, encoder connection error, and etc., overall 12 types
- Frame size 60mm, 86mm supported

Applications

• Filed requiring preciseness such as semiconductor equipment, 3D printer, optical inspection equipment, chip mounter, cartesian robot, conveying equipment, and alignment stage.

- g	Max. inp	out pulse freq.*4	CW, CCW: 500kHz				
Input	resistan	ce	220Ω (CW, CCW), 10kΩ (Servo On/Off, alarm reset)				
Insula	ition resi	stance	Over 100MΩ (at 500VDC megger)				
Dielec	ctric stre	ngth	1,500VAC 50/60Hz for 1 min				
Vibrat	ion		1.5mm amplitude at frequency of 10 to 55Hz (for 1 min) in each X, Y, Z direction for 2 hours				
Shock	<		300m/s² (approx. 30G) in each X, Y, Z direction for 3 times				
Envir	onment	Ambient temp.	0 to 50°C, storage: -10	to 60°C			
LIIVIIC	Jillient	Ambient humi.	35 to 85%RH, storage: 10 to 90%RH				
Appro	val		CE .				
	ction stru	ucture	IP20 (IEC standard)				
Weigh	nt ^{*5}		Approx. 900g (approx. 7	780g)			

X1: Based on the ambient temperature 25°C, ambient humidity 55%RH, and STOP current 30%.

Y-58 Autonics

^{※2:} Max. power consumption during operation. When changing the load rapidly, instantaneous peak current may increase. The capacity of power supply should be over 1.5 to 2 times of max. power consumption.

^{*3:} RUN current varies depending on the input RUN frequency and max. RUN current at the moment varies also.

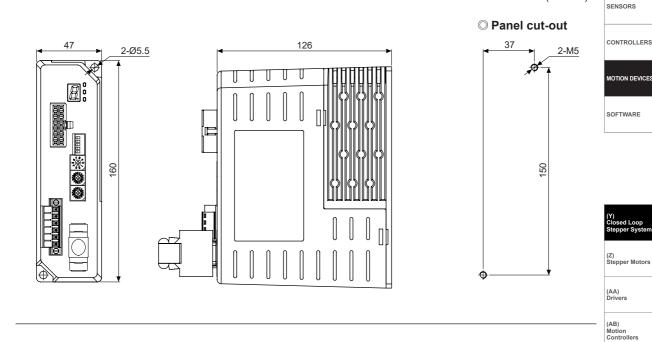

^{**4:} Max. input pulse frequency is max. frequency to be input and is not the same as max. pull-out frequency or max. slewing frequency.

X5: The weight includes packaging. The weight in parenthesis is for unit only.

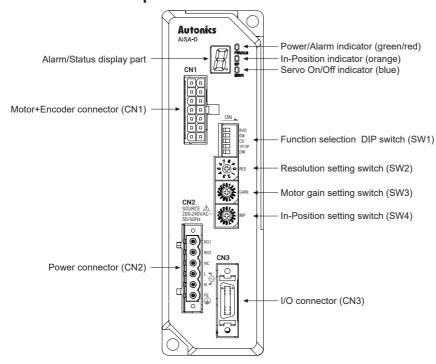

XEnvironment resistance is rated at no freezing or condensation.

(unit: mm)

Autonics Y-59

Driver Status Indicators

Indicator & Display part	LED color	Function	Descriptions
	Green	Power indicator	Turns ON when the unit operates normally after supplying power
PWR/ALM	Red	Alarm indicator	When alarm occurs, it flashes in various ways depending on the situation. Refer to ■ Control Input/Output → ② Output → 2. Alarm'.
INP	Orange	In-Position indicator	Turns ON when motor is placed at command position after positioning input.
SERVO	Blue	Servo On/Off indicator	Turns ON when Servo is operating, turns OFF when servo is not operating.
Alarm/Status display part	Red	Alarm, status indicator	When alarm occurs, it displays number of the corresponding alarm and the setting number of the rotary switches (RES/GAIN/INP)

Driver Setting

O SW1: Function selection DIP switch

-Set rotation direction, pulse input method, STOP current, gain setting, and test mode.

Sat	Setting switch		Name	Function	Switch position		
Set			IName	Function	ON	OFF (factory default)	
	2	1	DIR	Rotation direction	ccw	CW	
	4	2	1P/2P	Pulse input method	1-pulse input method	2-pulse input method	
	2 3	3	CD	STOP current	20% of max. RUN current	30% of max. RUN current	
		4	GM	Gain setting	High gain	Low gain	
	_ → Z	5 ^{*1}	RVD	Test mode	Test mode	Normal mode	

%2-pulse input method

Rotation angle

position

CW: forward rotation signal input

X1: Set to OFF when using the device. It is only for the operation test in manufacturing process.

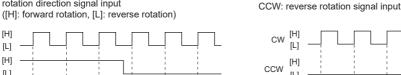

• Pulse input method

#1-pulse input method

CW: rotation operation signal input

CCW: rotation direction signal input

([H]: forward rotation, [L]: reverse rotation)

CCW

**[H]: photocoupler ON (voltage of both ends 4-8VDC) [L]: photocoupler OFF (voltage of both ends 0-0.5VDC)

STOP current

CCW

Rotation angle

-In order to decrease motor heat and current consumption at motor stopping moment (in case there is no input during the time of the double width of last input pulse), set the stop current supplied to the motor phase.

O SW2: Resolution setting switch

- -Set the resolution of driver.
- -The number of pulses per 1 rotation by resolution is each 500, 1000, 1600, 2000, 3200, 3600, 5000, 6400, 7200, 10000.
- -Modified setting values are not applied in the running status, and the values will be applied after motor stopped.

Setting switch	Setting	Pulse/Revolution	Resolution
	0 (factory default)	500	2.5
	1	1000	5
	2	1600	8
6 7 8 0	3	2000	10
 • (¬¬>) •	4	3200	16
\\ \alpha \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\	5	3600	18
8 7	6	5000	25
RES	7	6400	32
	8	7200	36
	9	10000	50

Y-60 Autonics

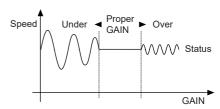

O SW3: Motor gain setting switch

-SW3 shifts motor gain between high and low, depending on 4th pin in SW1.

Motor gain

- -Motor gain is selectable from 32 gains.
- -The larger gain is, the more improved transient response becomes and the less error occurs.
- *At the lowest system load status, raise the gain value until motor vibrates and set to 1 to 2 level lower.

Catting quitab	4th pin in SW1=OFF				4th pin in SW1=ON			
Setting switch	Setting	GAIN	Setting	GAIN	Setting	GAIN	Setting	GAIN
	0	×1	8	×9	0	×17	8	×25
	1	×2	9	×10	1	×18	9	×26
ABCOR	2	×3	A	×11	2	×19	A	×27
│ │∞ (弓▷) ○ │	3	×4	В	×12	3	×20	В	×28
0 5 7 5 7	4	×5	С	×13	4	×21	С	×29
	5	×6	D	×14	5	×22	D	×30
GAIN	6	×7	E	×15	6	×23	E	×31
	7	×8	F	×16	7	×24	F	×32

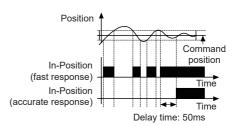

○ SW4: In-Position setting swtich

-After position command pulse has finished, if the gap between target position and real position is under In-Position setting value, positioning completion pulse is output.

-Modified setting values are not applied in the running status, and the values will be applied after motor stopped.

Sotting awitch	Fast response		Accurate response	
Setting switch	Setting	Value	Setting	Value
	0 (factory default)	0	8	0
	1	±1	9	±1
VBCOW.	2	±2	Α	±2

IINF	6	±6	E	±6
	7	±7	F	±7

■ Contol Input/Output

Inner signal of all input/output consists of photocoupler. ON, [H]: photocoupler power ON

OFF, [L]: photocoupler power OFF

O Input

1. Position command pulse

-Pulse input is selectable from 1-pulse input method and 2-pulse input method.

(Refer to 'O SW1: Function selection DIP switch'.)

-When using extending cable, it is recommended to connect Common mode choke coil (2mH) to the CW, CCW terminal in series connection.

2. Servo On/Off

-This signal is for rotating axis of motor using external force or used for manual positioning

-Servo On/Off signal maintains over 1ms as [H]

: Regarded as Servo Off signal and phase current is cut to release torque.

The Servo ON indicator, the In-Position output and indicator turns OFF.

-Servo On/Off signal maintains over 1ms as [L]

: Regarded as Servo On signal and phase current is supplied to gain torque.

The Servo ON indicator, the In-Position output and indicator turns ON.

XStop the motor for using the signal.

**Refer to '4. Example of input circuit connection'.

3. Alarm Reset

- -This signal is for clearing the alarm.
- -Alarm reset signal maintains over 20ms as [H]
- : Alarm is cleared, the alarm indicator and alarm output turns OFF, and the driver returns to normal status.
- XIf the causes of the alarm are not removed, driver may not be returned to the normal status even with alarm reset.

※Refer to '4. Example of input circuit connection'.

SENSORS

.....

SOFTWARE

(Y) Closed Loop Stepper System

(Z) Stepper Motors

(AA) Drivers

(AB) Motion Controllers

AiSA-D Series

4. Example of input circuit connection

• Input pulse (CW, CCW)

-It is recommended to use 5VDC at V_{CC} and short the R_L.

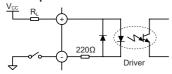

-In case V_{cc} is over 5VDC, calculate R₁ value using following formula and use V_{cc} below 30VDC.

$$R_{L} = \frac{V_{CC} - 2.17V}{0.011A} - 220\Omega$$

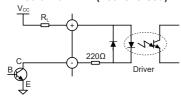

-In case $V_{\mbox{\tiny cc}}$ is 12, 24VDC, refer to the table on the right for $R_{\mbox{\tiny L}}.$

V _{CC}	R _L
12VDC	680Ω (min. 0.25W)
24VDC	1.8kΩ (min. 0.5W)

A. Pull-Up

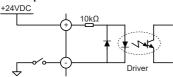

C. Circuit with NPN (not-reversed)

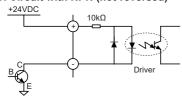

• External input (Servo On/Off, Alarm Reset)

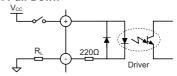

A. Pull-Up

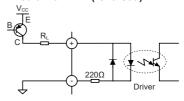

C. Circuit with NPN (not-reversed)

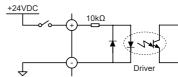

B. Pull-Down

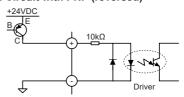

D. Circuit with PNP (reversed)

B. Pull-Down

D. Circuit with PNP (reversed)

Output

1. In-Position

-In-Position output is output condition of positioning completion signal.

-If the gap between target position and real position is under In-Position setting value after position command pulse has finished, In-Position output turns to [H] and the In-Position indicator turns ON.

-In reverse, when the gap is over In-Position setting value, In-Position output turns to [L] and the In-Position indicator turns OFF.

-For accurate drive, check the In-Position output again and execute the next drive.

*Refer to '3. Example of output circuit connection'.

Y-62 Autonics

2. Alarm

Alarm

-This function stops motor to protect driver, depending on the error status such as overcurrent or overspeed.

-In case of normal status, output is [H], and in case of alarming status, output is [L].

-When supplying alarm reset, driver returns to the normal status.

*Refer to '3. Example of output circuit connection'.

• Alarm/Status display

-When alarm occurs, the alarm indicator (ALM, red) flashes as the times of corresponding alarm type.

-The alarm/status display part displays the number of the corresponding alarm type.

ALM flashing times	Alarm/ Status	Alarm type	Descriptions	Motor stop	Maintain torque
1	- 1	Overcurrent error	When overcurrent flows at motor RUN element		
2	2	Overspeed error	When motor speed is over 3,500rpm		
3	3	Position tracking error	When the gap between position command value and current position value is over 90°		
4	4	Overload error	When applying load over the rated load for over 1 sec		
5	5	Overheat error	When heatsink temperature is over 90°C		
6	5	Motor connection error	When motor cable connection error occurs at driver		
7	7	Encoder connection error	When encoder cable connection error occurs at driver	0	×
8	8	Overvoltage error	When input voltage is over 240VAC +10%		
9	9	Undervoltage error*1	When input voltage is under 200VAC -10%		
10	R	Motor misalignment	When motor is in misalignment		
11	Ь	Command nulsa arrar	When input pulse is over 3,500rpm		
11	0	Command pulse error	When pulse is input before initial alignment		
12	Е	In-Position error	When position error (over 1) is kept over 3 sec, after motor stopped.		

X1: When cutting off the power, the undervoltage error occurring is normal operation.

*Depending on the alarm type, it flashes for 0.4 sec interval and it turns OFF for 0.8 sec repeatedly.

<E.g. case of alarm 3>

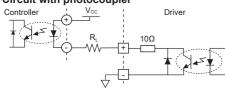

3. Example of output circuit connection

-It is recommended to use below 50VDC at V_{cc}. Use the R_L for I_c (collector current of secondary detector) of photocoupler inside the driver to be within 25mA following the below formula.

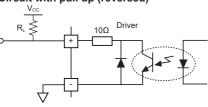

$$A: R_{L} = \frac{V_{CC} - 0.3V - V_{E}}{0.025A} - 10\Omega$$
 $B, C: R_{L} = \frac{V_{CC} - 0.3V}{0.025A} - 10\Omega$

(V_F is LED forward voltage of primary photocoupler.)

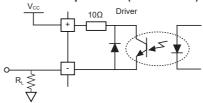

A. Circuit with photocoupler

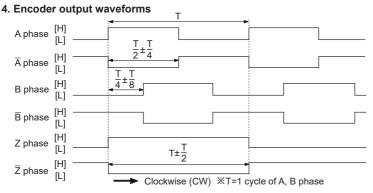

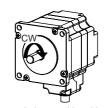

B. Circuit with pull up (reversed)

C. Circuit with pull down (not-reversed)

XIt is recommended to use Line driver output (corresponding to 26C32) at RECEIVER end of encoder output and terminating resisters (100-150Ω) in parallel at both ends of each phase (A, Ā, B, B, Z, Z, corresponding to 26C31). SENSORS

Options for Power Connector (CN2)

Options	Model	Specifications	Manufacture			
Regenerative	IRC100	 Resistance: 100Ω ±5%, Rated power: 60W(standby), 100W(with heatsink) 	RARA Electronics Corp.			
resistance	Used when the load inertia is large or the deceleration time is short. Forced cooling is required when the surface temperature of the regenerative resistor is high.					
Noise filter	RNS-2010	Rated voltage: 250V Rated current: 10A Max. leakage current: 1mA	Orient Electronics			
	Connect the unit to the power side to suppress external noise. Keep wiring as short as possible, and must ground it when connecting power.					
Curre protector	LT-C12G801W	_	OTOWA Electric CO. Ltd			
Surge protector	Connect the unit to the power side to protect the product from external noise and surge.					

XUse the unit which is commercially available

Troubleshooting

1. When motor does not rotate

- ①Check the connection status between controller, driver, and pulse input specifications (voltage, width).
- ②Check the pulse and direction signal are connected correctly.

2. When motor rotates to the opposite direction of the designated direction

- When RUN mode is 1-pulse input method, CCW input [H] is for forward, [L] is for backward.
- ②When RUN mode is 2-pulse input method, check CW and CCW pulse input are changed or not.

3. When motor drive is unstable

- ①Check that driver, motor are connected correctly.
- ②Check the driver pulse input specifications (voltage, width).

Proper Usage

- Follow instructions in 'Proper Usage'. Otherwise, it may cause unexpected accidents.
- Do not input CW, CCW signal at the same time in 2-pulse input method.
- When the signal input voltage is exceeded the rated voltage, connect additional resistance at the outside.
- \bullet To extend the motor+encoder cable, use the designated the cable.
- Keep the distance between power cable and signal cable more than 10cm.
- Install the unit vertically on the alarm/status display part upper side.
- For heat radiation of the driver, install a fan.
- Do not change any setting switches (function, resolution, motor gain, in-position switches) during the operation or after supplying power. Failure to follow this instruction may result in malfunction.
- Motor vibration and noise can occur in specific frequency period.
 - ①Change motor installation method or attach the damper.
 - ②Use and set the gain value.
- For using motor, it is recommended to maintenance and inspection regularly.
- ①Unwinding bolts and connection parts for the unit installation and load connection
- ②Strange sound from ball bearing of the unit
- 3 Damage and stress of lead cable of the unit
- 4 Connection error with motor
- ⑤Inconsistency between the axis of motor output and the center, concentric (eccentric, declination) of the load, etc.
- This product does not prepare protection function for a motor.
- This unit may be used in the following environments
- ①Indoors (in the environment condition rated in 'Specifications')
- ②Altitude max. 2,000m
- 3 Pollution degree 2
- 4 Installation category II
