BFC Series CÔNG TY CỔ PHẦN CÔNG NGHỆ HỢP LONG

Digital Fiber Optic Amplifier (BF5) Communication Converter

Features

- Sets all Functional performance and parameters from external devices (PL, PLC)
- Supports various communications
 - : RS485 communication, Serial Communication, SW input
- Connected up to 32 amplifier units (BF5 series)
- Slim design with depth 10mm (W10×H30×L70mm)

User Manual

- Visit our website (www.autonics.com) to download user manual and communication manual.
- User manual describes for specifications and function, and communication manual describes for RS485 communication (Modbus RTU protocol) and parameter address map data.

Comprehensive Device Management Program (DAQMaster)

- DAQMaster is comprehensive device management program to set parameter and manage monitoring data.
- Visit our website (www.autonics.com) to download user manual and comprehensive device management program.

< Computer specification for using software >

Item	Minimum requirements		
System	IBM PC compatible computer with Intel Pentium III or above		
Operations	Microsoft Windows 98/NT/XP/Vista/7/8/10		
Memory	256MB+		
Hard disk	1GB+ of available hard disk space		
VGA	Resolution: 1024×768 or higher		
Others	RS-232 serial port (9-pin), USB port		

DAQMaster screen >

Specifications

INDUSTRIAL AUTOMATION

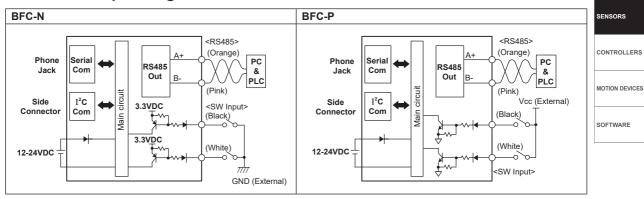

Model		NPN Solid-state input	PNP Solid-state input	
		BFC-N	BFC-P	
Power supply ^{×1} 12-24VDC== ±10%				
Current co	onsumption	Max. 40mA		
SW input (SW1, SW2)		LOW: 0-1V, HIGH: 5-24V		
		SW1/SW2 - HH: Standby, HL: BANK0,	SW1/SW2 - LL: Standby, LH: BANK0,	
		LH: BANK1, LL: BANK2	HL: BANK1, HH: BANK2	
Communication function		RS485 communication, serial communication, SW input		
Communi	cation speed	ion speed 1200, 2400, 4800, 9600, 19200, 38400bps		
Indication		Parameter: Red 4-digit 7-segment		
		• Set value: Green 4-digit 7-segment • Indicator: TX indicator (red), RX indicator (green)		
Function		Real-time monitoring (incident light level, on/off state)		
		Executes every BF5 feature and sets parameter by external device (PC, PLC)		
Environ-	Ambient temperature	-10 to 50°C, storage: -20 to 60°C		
ment	Ambient humidity	35 to 85%RH, storage: 35 to 85%RH		
Vibration	bration 1.5 mm amplitude at frequency of 10 to 55Hz (for 1 min) in each X, Y, Z direction for 2 hours		in) in each X, Y, Z direction for 2 hours	
Shock	ck 500m/s² (approx. 50G) in each X, Y, Z direction for 3 times		times	
Protection structure		IP40 (IEC standard)		
Material		Case: Polybutylene terephthalate, Cover: Polycarbonate		
Accessory		Connector type wire (Ø4mm, 3-wire, 2m)		
		(AWG 22, core diameter: 0.08mm, number of cores: 60, insulator out diameter: Ø1.25mm), Side connector		
Approval	Approval (E			
Unit weigl	nit weight Approx. 15g			

X1: Power is supplied from the voltage of the amplifier unit connected by a side connector.

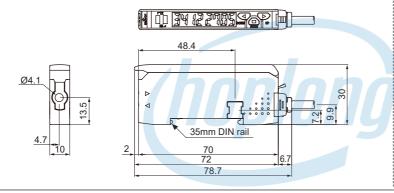

XEnvironment resistance is rated at no freezing or condensation.

Installations

O DIN rail installations

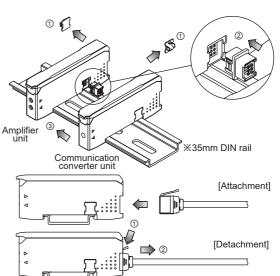

- Attachment: Hang up the backside holder on the DIN rail and press the unit toward the DIN rail.
- Detachment: Slide the back part of the unit as the ① figure and lift up the unit as the ② figure.

O Communication converter unit (BFC series) and Amplifier unit (BF5 series) Connection

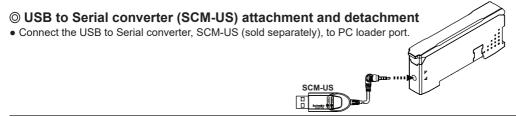

- Remove the side cover at the side of communication converter unit where amplifier unit will be connected.
- Attach the side connector to the socket on the side of the communication converter.
- XBe sure that if you connect a side connector with excessive force, it may cause extruded pins.
- After attaching the communication converter unit and the amplifier unit to the DIN rail, push gently to make both units fastened into each other.
- XImproper connection may cause malfunction.
- XDo not supply the power while connecting or disconnecting.

Connector cable attachment and detachment

- Attachment: Insert the connector cable into the installed communication converter unit on DIN rail until it clicks.
- Detachment: Pull out the connector cable by pressing the connector cable lever downside.

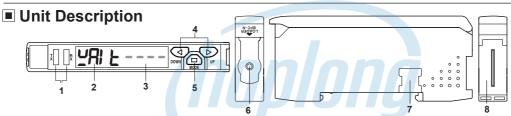

n

Communication Converter (sold separately)

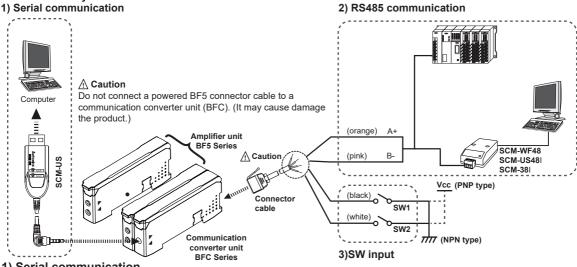

- 1. TX (Send)-Red LED, RX (Receive)-Green LED: Turns on when communicating and inputting SW.
 2. Parameter indication (4-digit red 7seg.): Indicates parameter and processes of communication instruction/execution.
- 3. Set value indication (4-digit green 7seg.): Indicates set value and process of communication instruction/execution.
- 4. UP, DOWN key: To modify set value
- 5. MODE key: To shift or select parameter when entering parameter setting mode.
- 6. PC loader port: In case of PC communication, use USB to Serial converter (SCM-US, sold separately).
- 7. Side cover: To connect an amplifier unit, use a side connector (accessory). Remove a side cover to connect an amplifier unit.
- 8. Connector cable port: Terminal for attaching a connector cable (accessory) is used for RS485 communication or SW input.

Communication Mode

This communication converter unit supports 2 communication modes and SW input mode. You can use only 1 mode of 3 modes.

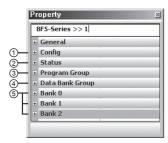

- 1) Serial communication
- ① Connect the USB to Serial converter (SCM-US, sold separately) to the PC loader port for communicating with PC.
- It is very easy to manage parameters and monitor data of connected amplifier units (BF5 series) by using the integrated management program DAQMaster (free).

CÔNG TY CỔ PHẦN CÔNG NGHỆ HỢP LONG CONVERTER

2) RS485 communication

- PLC connection: ① Connect directly to a PLC by using RS485 communication cable of the communication converter unit.
 ② Amplifier units (BF5 series) can be controlled through PLC.
- PC connection: ① Connect PC by using Communication converter (SCM-WF48, SCM-US48I, SCM-38I sold separately).
 - ② It is very easy to manage parameters and monitor data of connected amplifier units (BF5 series) by using the comprehensive device management program DAQMaster (free).

**Following is a screen of DAQMaster properties window of a computer connected communication converter unit.

① Config

Indicates the number of amplifier units connected to the communication converter unit (BFC).

② Status

Indicates the information of the selected amplifier unit (dual, single) by channel, connected to communication converter unit (BFC).

3 Program group

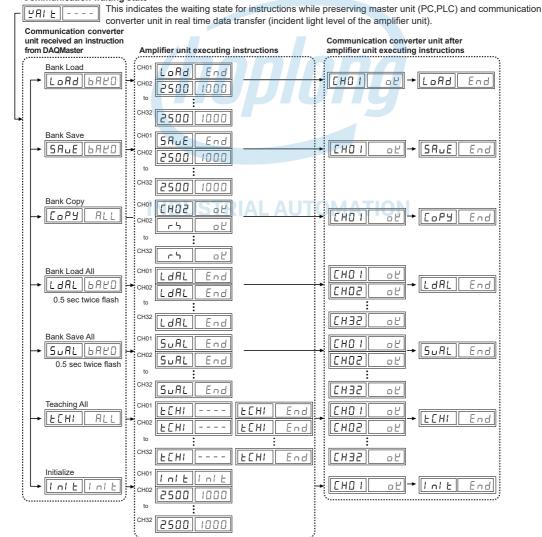

Set values of the amplifier unit can be changed. When set values of the amplifier unit are changed, TX (red) and RX (green) LEDs on communication converter unit will flash indicating application of set values to the amplifier unit.

Data Bank Group

Data bank and group teaching features of amplifier unit can be set. Amplifier unit can be initialized as well.

XIndications appear on communication converter and amplifier units depending on applied instruction as below.

Communication waiting state

⑤ Data Bank: Set value of data bank (Bank 0, Bank 1, Bank 2) can be saved.

3) SW input

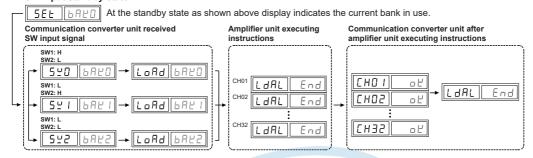

SW input is a feature which allows amplifier unit connected with the communication converter unit to load all banks. Applying signals to SW1 (Black) and SW2 (White) of the connector cables connected to the communication converter unit allows change of banks as shown in chart 1. (SW input signal duration should be longer than 3 seconds.)

[Chart 1] Bank selection table based on SW input

\square	Bank	NPN		PNP	
$ \ $	Dalik		SW2	SW1	SW2
1	Standby signal (Using set Bank)	Н	Н	L	L
2	Bank 0	Н	L	L	Н
3	Bank 1	L	Н	Н	L
4	Bank 2	L	L	Н	Н

XIndications appear on communication converter and amplifier units depending on applied instruction as below.

SW input standby state

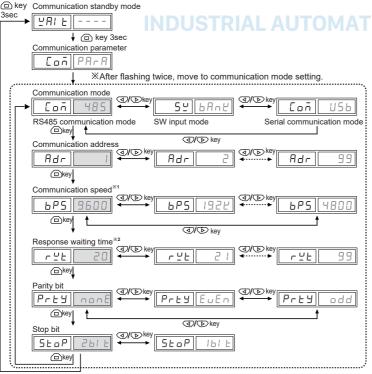

< Communication specification >

Standard	EIA RS485	Standard	EIA RS485
Maximum connections	31 (address setting: 01 to 99)	Response wating time	20 to 99ms
Communication method	2-wire half duplex	Start bit	1-bit (fixed)
Synchronization method	Asynchronous	Stop bit	1-bit, 2-bit
Effective communication distance	Max. 800m	Parity bit	None, Even, Odd
Communication and	1200, 2400, 4800, 9600,	Data bit	8-bit (fixed)
Communication speed	19200, 38400bps	Protocol	Modbus RTU

It is not allowed to set overlapping communication address at the same communication line.

XPlease use a proper twist pair for RS485 communication.

Parameter Setting

:1:	Communication speed display		
	Speed Display		
	1200	1500	
	2400	2400	
	4800	4800	
	9600	9600	
	19200	1925	
	38400	3846	

X2: Communication response waiting time ranges is 20 to 99ms (Depending on the number of amplifier units connected, response time may increase up to 350ms.)

Error Code

Error code	Cause	Troubleshooting
ErA	Reading/Writing errors occur while processing data in EEPROM of amplifier unit.	Check the circuitry around EEPROM inside the product.
Erb	Slave fails to execute Master's group instructions such as Copy/Load/Save/Teaching sent through communication line due to unstable communication line. Other communication problems.	Check the connection status between communication unit and amplifier units. Check the circuitry around the side connector and hardware condition.

CONTROLLERS

SENSORS

MOTION DEVICES

SOFTWARE

Solution methods for communication problems

- 1) Communication errors during Serial or RS485 connections
- Check if the communication mode selected in communication converter unit suits in installation environment.
- Check and equalize the address of communication converter unit and address set in DAQMaster.
- Check and equalize the communication port of communication converter unit and the communication port number set in DAQMaster.
- 2) Communication errors during SW signal input
- Check if the communication mode set in communication converter unit is SW input mode (SW Bank).
- Check if the connections are made thoroughly depending on NPN or PNP input type.
