Lexium CAS 4 cantilever axes

Lexium CAS4•B cantilever axis with motor and gearbox

Presentation (1)

Lexium CAS 4 cantilever axes are linear motion axes. They consist of a mobile axis structure and a fixed drive element.

The mobile axis structure is used to support the load. Its design is based on an anodized aluminum profile. The rail is driven by a toothed belt with roller or ball guides.

Lexium CAS 4 cantilever axes are designed for applications that require positioning of heavy loads over long distances with a high dynamic response.

These axes, with a ball guide, are particularly suitable for applications requiring high forces and significant torque.

Rollers offer a simple and cost-effective guiding solution for other applications.

Lexium CAS 4 cantilever axes offer various configuration options. These include axis length, various types of sensor for the limit switch function, and the addition of a protective metal strip (see page 8).

Schneider Electric offers a number of drive elements that can be used to drive Lexium CAS 4 cantilever axes (2) (see pages 4 and 9).

Third-party drive elements can also be used under certain conditions. Contact our Customer Care Center for further details.

Applications

Applications with the following requirements:

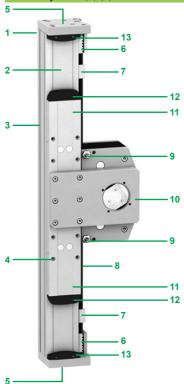

- Loop-back movement within a work area: pusher, etc.
- High feed forces: clamping, cutting, etc.
- Positioning over long distances: material handling, etc.

Special product features

- Profile with T-slots on 2 sides
- Load can be fixed to the 2 end blocks and to one of the sides using the T-slots
- Drive block with centering tapped holes for mounting the load
- Quick-coupling system for easy drive element assembly
- Stroke in various lengths available per millimeter
- (1) All technical data (characteristics, dimensions, etc.) for Lexium CAS 4 cantilever axes is available on our website www.schneider-electric.com
- (2) When selecting the drive element, the maximum permissible driving torque for the axis drive shaft must always be taken into account.

Lexium CAS 4 cantilever axes

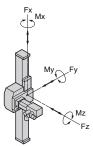

Description (1) (2)

- 1 Lexium CAS4•B cantilever axis
- 2 Protective metal strip
- 3 T-slots for mounting the load on the side
- 4 Tapped holes with centering holes for mounting the load
- 5 End blocks
- 6 Brackets for toothed belt
- 7 Detection plates for sensors
- 8 Toothed belt
- 9 Sensors for the limit switch function
- 10 Drive block
- 11 Protective metal strip deflectors
- 12 Buffers
- 13 Brackets for protective metal strip

Lexium CAS 3 cantilever axes

Lexium CAS 3 cantilever axis with motor and gearbox mounted

Presentation (1)

Lexium CAS 3 cantilever axes are linear motion axes with a rack or a toothed belt for driving the carriage and ball guides for guidance. They consist of a mobile axis structure and a fixed drive element.

The mobile axis structure, designed on the basis of 2 parallel rods, is used to support the load. This structure is driven by a rack or a toothed belt, depending on the size of the axis

This type of mobile structure supports the use of a light, compact, yet highly rigid axis

Lexium CAS 3 cantilever axes offer various configuration options. These include axis length, various types of sensor for the limit switch function, an anti-corrosion version, and anti-static toothed belt (see page 12).

Schneider Electric offers a number of drive elements that can be used to drive Lexium CAS 3 cantilever axes (2) (see pages 4 and 13).

Third-party drive elements can also be used under certain conditions. Contact our Customer Care Center for further details.

Applications

Applications with the following requirements:

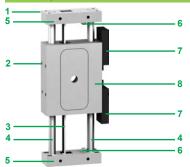

- High-speed positioning for short working distances: material handling, etc.
- High feed forces: clamping, assembly, etc.

Special product features

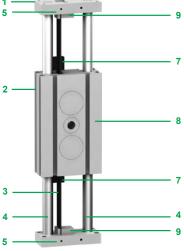

- Excellent rigidity
- Mobile structure with light travel weight
- Compact
- Load can be fixed to the 2 end blocks
- Various possible mounting options to assist integration into wider solutions
- Stroke in various lengths available per millimeter
- (1) All technical data (characteristics, dimensions, etc.) for Lexium CAS 3 cantilever axes is available on our website www.schneider-electric.com
- (2) When selecting the drive element, the maximum permissible driving torque for the axis drive shaft must always be taken into account.

Lexium CAS 3 cantilever axes

Description (1) (2)

Lexium CAS30R, CAS31B

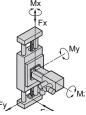

- 1 Lexium CAS3●● cantilever axis
- 2 Tapped holes or T-slots for mounting the axis
- 3 Rack or toothed belt
- 4 Tubes providing mobile structure and guide method
- 5 End blocks with centering tapped holes for mounting the load (these blocks also act as detection plates for sensors)
- 6 Buffers
- 7 Sensors
- 8 Drive block
- 9 Tensioner for toothed belt

Lexium CAS 2 telescopic axes

Lexium CAS 2 telescopic axis with motor and gearbox mounted

Presentation (1)

Lexium CAS 2 telescopic axes are linear motion axes. They consist of a mobile axis structure, a mobile carriage, and a fixed drive element.

This technology combination offers a longer maximum stroke than the actual length of the axis. The axis is able to move within a work area before moving out again completely.

The mobile carriage is used to support the load. It is driven by a toothed belt with roller or ball guides. The design of the mobile structure is based on a very strong profile made of anodized aluminum. The mobile structure is driven by a toothed belt.

Lexium CAS 2 telescopic axes are designed for loading and unloading applications in work areas subject to access restrictions imposed, for example, by set working periods or limited space.

Lexium CAS24BB axes, with a ball guide, are particularly suitable for applications requiring high forces and significant torque.

The rollers on Lexium CAS24BR axes offer a simple and cost-effective guiding solution for other applications.

Lexium CAS 2 telescopic axes offer various configuration options. These include axis length, various types of sensor for the limit switch function, and a choice between 2 carriage types of different sizes (see page 16).

Schneider Electric offers a number of drive elements that can be used to drive Lexium CAS 2 cantilever axes (2) (see pages 4 and 17).

Third-party drive elements can also be used under certain conditions. Contact our Customer Care Center for further details.

Applications

Applications requiring positioning over long distances where space is at a premium:

- Material handling
- Stock transporters
- Transfer machines
- Ftc

Special product features

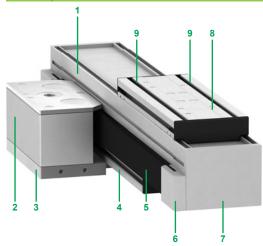

- Excellent rigidity with light travel weight
- Carriage with T-slots for easy load mounting
- Compact
- Stroke in various lengths available per millimeter

⁽¹⁾ All technical data (characteristics, dimensions, etc.) for Lexium CAS 2 telescopic axes is available on our website www.schneider-electric.com

⁽²⁾ When selecting the drive element, the maximum permissible driving torque for the axis drive shaft must always be taken into account.

Lexium CAS 2 telescopic axes

Description (1) (2)

- 1 Lexium CAS24B telescopic axis
- 2 Drive block
- 3 Adapter plate for drive unit
- 4 Chariage for mounting the axis
- 5 Toothed belt for driving mobile axis structure
- 6 Bracket for toothed belt driving mobile axis structure
- 7 End plate
- 8 Carriage to support load
- 9 Slots for load mounting
