

# Current transformers

Schneider Electric is the global specialist in energy management with the most complete power monitoring product line. Current Transformers are essential components designed to be used with Schneider Electric's extensive power monitoring product portfolio. From simple energy meters to world class power quality meters, these proven products satisfy any requirement.

## Ip/5 A ratio

Application diagram of a CT.

The Ip/5 A ratio current transformer delivers at the secondary a current ( $I_s$ ) of 0 to 5 A that is proportional to the current measured at the primary ( $I_p$ ). This allows them to be used in combination with measurement equipment:

- Ammeters.
- Kilowatt-hour meters.
- Measurement units.
- Control relays.
- etc.

When the primary is energized, the measurement equipment nearly acts as a short circuit which keeps the secondary voltage very low. This voltage will increase significantly if the short circuit is removed.

### CT selection - conductor rating aspects

The choice depends on the conductor profile and the maximum intensity of the primary circuit.

#### CT with let-through primary

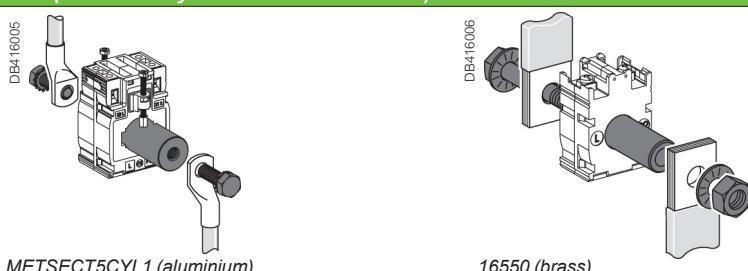

Conductor type	Cable	Mixed, bars or cables	Vertical or horizontal bars	Vertical bars
Suggested Current Transformer and mounting	DB415986	DB415920	DB415988	DB415989
Ratings (A)	40 to 250	150 to 800	200 to 4000	5000 to 6000
CT internal	Type C	Type M	Type D <sup>(1)</sup>	Type V
	FF C	FF MA FF MB FF MC FF MD MD	FF D	FF V2 VV

(1) Two secondary connectors (parallel internal wiring - only one secondary winding) for easier cable access. 1 lateral + 1 on one extremity. Warning: only one must be used at a time.

### Specific mounting: use of cylinder

A cylindrical metallic spacer ensures a proper CT positioning when the conductor or the CT cannot be positioned perpendicular. Secured by bolt + nut.

#### CT with primary connection by screw and nut (example: use of cylinder with bar or cable)

NOTE: This document is not intended to be used as an installation guide.

## CT selection - Electrical aspect Ip/5 A

- We recommend that you choose the ratio immediately higher than the maximum measured current ( $I_n$ ). Example:  $I_n = 1103$  A; ratio chosen = 1250/5.
- For small ratings:** From 40/5 to 75/5 and for an application with digital devices, we recommend that you choose a higher rating, for example 100/5. This is because small ratings are less accurate and the 40 A measurement, for example, will be more accurate with a 100/5 CT than with a 40/5 CT.
- Specific case of the motor starter:** to measure motor starter current, you must choose a CT with primary current  $I_p = I_d/2$  ( $I_d$  = motor starting current).

## Validation of measurement solution according to accuracy class

It consists in controlling the right adaptation of the CT on the accuracy class aspect. The accuracy class is specified in the project. The total dissipated power of the measurement circuit (meter + cables) should not be superior to the specified limit of the CT. This limit is for different standard classes. If necessary, the choice of the cable section, the CT or meter should be modified to fit the requirement.

Copper cable cross-section (mm <sup>2</sup> )	Power per doubled meter at 20 °C (VA)	Schneider Electric device	Consumption of the current input (VA)
1	<b>1</b>	Ammeter 72 x 72 / 96 x 96	<b>1.1</b>
1.5	<b>0.685</b>	Analog ammeter	<b>1.1</b>
2.5	<b>0.41</b>	Digital ammeter	<b>0.3</b>
4	<b>0.254</b>	PM8000	<b>0.15</b>
6	<b>0.169</b>	PM3000	<b>0.3</b>
10	<b>0.0975</b>	PM5000	
16	<b>0.062</b>	iEM3000	

For each temperature variation per 10 °C bracket, the power drawn up by the cables increases by 4 %.

## Application example

Project specification: **200 A**, in **Ø27** mm cable, accuracy class 1.

Our choice is **METSECT5MA020**.

For this CT selected on the chart (next page), the max acceptable power is **7 VA** (for "Accuracy class 1" which is specified in the project).

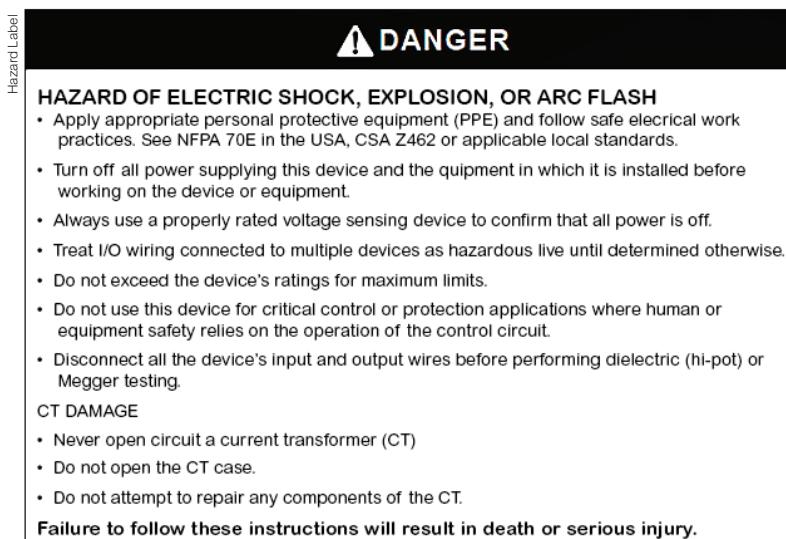

Internal profile type	Cables (mm)	Bars (mm)	Rating Ip/5 A (A)	Commercial reference number	Accuracy class		
					0.5	1	3
Max. power (VA)							
MA	Ø27	10 x 32	150	METSECT5MA015	3	4	-
FF ME		15 x 25	200	METSECT5MA020	4	7	-
			250	METSECT5MA025	6	8	-
			300	METSECT5MA030	8	10	-
			400	METSECT5MA040	10	12	-

Control of the conformity of the measurement chain:

- PM3000 multi-meter: 0.3 VA.
- 4 meters of 2.5 mm<sup>2</sup>, doubled wires:  $0.41 \times 4 = 1.64$  VA.

**Total:  $0.3 + 1.64 = 1.94$  VA (< 7 VA)**

**Conclusion:** this CT is well adapted as the accuracy class will be even better than 1.

PB118085

## Presentation of commercial reference numbers

MET SE CT **X** **XX** **XXX**

1 = 1 Amp  
5 = 5 Amp  
R = Rogowski

Last 3 digits = primary rating/10

2 letters = Form Factor

### Examples:

METSECT5CC008 = 5 A secondary, Cables only, 75 A primary

METSECT5MC080 = 5 A secondary, mixed for cables and bars, 800 A primary

METSECTR30500 = Rogowski CT, 300 mm length, 96 mm diameter 50 A to 5000 A
