

Variable speed drives

Altivar Process ATV900

Catalog
June 2015

How can you fit a 6000-page catalog in your pocket ?

Schneider Electric provides you with the complete set of industrial automation catalogs all on a handy USB key for PC or in an application for tablets

Digi-Cat, a handy USB key for PC

- > Convenient to carry
- > Always up-to-date
- > Environmentally friendly
- > Easy-to-share format

Contact your local representative to get your own Digi-Cat

e-Library, the app for tablets

If you have an iPad®:

- > Go to the App Store and search for e-Library
- > or scan the QR code

If you have an Android tablet:

- > Go to the Google Play Store™ and search for eLibrary
- > or scan the QR code

Variable speed drives

Altivar Process ATV900

Process efficiency, real-time intelligence

Altivar Process

Provides the efficiency you deserve

Altivar Process is the new comprehensive range of variable speed drives from Schneider Electric covering the majority of industrial applications with 2 series:

- > ATV600: drives focused on fluid management and processing and energy saving
- > ATV900: drives focused on maximum productivity with exceptional motor control and connectivity

Wall-mounting drives, built-in cabinet, and floor-standing solutions are available with IP 21, IP 23, IP 54, and IP 55 protection degrees, according to customer requirements.

Wall-mounting drives from 0.75 kW to 160 kW

Floor-standing drives from 110 kW to 315 kW

Drive Systems from 110 kW to 800 kW

From basic design to customized offer

Altivar Process drives

Display screen

Process efficiency

Motor performance and connectivity

- > Excellent motor performance on any type of motor
- > Dual port Ethernet offers maximum services such as connection to the control room and process transparency
- > Network service helps ensure operation continuity even in case of connection breakdown
 - > Web server and data logging help reduce downtime through fast troubleshooting and preventive maintenance

Complete control of your applications

- > Maximize your application performance by using Drive-to-Drive communication: total control of any kind of coupling in master/slave applications
- > Total management and flexibility of speed and torque on rigid and elastic coupling
- > Asset protection functions to increase production and reduce downtime

Real-time intelligence

Web server and services via Ethernet

- > Embedded web server interface based on the Ethernet network gives you process monitoring with your daily working tools.
- > Local and remote access to energy use and customized dashboards means your energy is visible anywhere, any time, on PC, tablet, or smartphone.

ODVA organization:
Supports network
technologies based on
EtherNet/IP

FDT Technology: An
international standard
with broad acceptance
in the automation
industry

User-friendliness

Simple integration in PLC environments

- > Easy integration thanks to standardized FDT/DTM and ODVA technology
- > Supported by predefined Unity Pro libraries
- > Easy access via PC, tablet, or smartphone
- > Secure connection via "Cyber-secure Ethernet"

Integration in the Modicon M580 automation platform

Scanning the QR code from
a smartphone or tablet

Instant access to online help

Sophisticated service concept

- > Modular design provides easy spare parts logistics
- > Optimized maintenance costs due to dynamic maintenance schedule, with integrated monitoring of individual components
- > Simple exchange of power modules and fans
- > Quick assistance with dynamic QR codes and Customer Care App

Green product

Designed to have a smaller carbon footprint

- > The Green Premium product label, Schneider Electric's eco-mark, indicates your compliance with international environmental standards such as:
 - > RoHS-2 according to EU directive C€ 2002/95
 - > REACH according to EU regulation 1907/2006
 - > IEC 62635: The end-of-life instructions comply with the latest recycling rules, 70% of the product components can be recycled.

IP 21, IP 54, or IP 55 variable speed drives for asynchronous and synchronous motors

Market segments		
■ Oil & gas ■ Mining, minerals & metals ■ Food & beverage ■ Water & wastewater 		
Mounting type	Wall-mounting	
Degree of protection	IP 21/UL Type 1	
Power range for 50...60 Hz line supply (1)	Three-phase: 200...240 V (kW/HP)	Three-phase: 200...240 V (kW/HP)
	Three-phase: 380...440 V (kW)	Three-phase: 380...440 V (kW)
	Three-phase: 380...480 V (kW/HP)	Three-phase: 380...480 V (kW/HP)
Drive	Output frequency	0.1...500 Hz
	Control type	Asynchronous motor Synchronous motor
Functions	Advanced functions	
	■ Performance on motor control with an overload torque up to 180% Tn in an open or closed loop ■ Asynchronous, synchronous, special motors: all efficiency classes, brand independent, permanent magnet motors, torque motors, conical sliding rotor, reluctance ■ Integrated EtherNet/IP and Modbus TCP dual port, cybersecurity (Achilles Level 2) ■ Smart integration in PlantStruxure and Foxboro Evo process automation systems ■ Optimized energy efficiency, detection of energy consumption drift of the installation ■ Adaptation to the process by dedicated functions with modular design ■ Embedded safety functions STO SIL3 ■ Master/slave and load sharing with drive-to-drive capability: □ torque sharing on rigid coupling □ torque sharing on elastic coupling ■ Contextual access to technical documentation through dynamic QR code ■ Continuous and historical real-time measurements with customizable dashboards ■ Predictive maintenance (e.g.: temperatures with PT100/1000 probe, fan monitoring, etc.) 1: STO (Safe Torque Off) SIL3 16	
Number of integrated I/O	Analog inputs	3: Configurable as voltage (0...±10 V) or current (0-20 mA/4-20 mA), including 2 for probes (PTC, PT100, PT1000, or KTY84)
	Digital inputs	8: Voltage 24 V --- (positive or negative logic)
	Digital output	1: Assignable
	Analog outputs	2: Configurable as voltage (0...10 V) or current (0-20 mA)

Altivar Process range

Process automation

The Altivar Process is an IP 21, IP 23, IP 54, or IP 55 variable speed drive for three-phase synchronous and asynchronous motors, specially designed for the following market segments:

- Oil & gas
- Mining, minerals & metals
- Food & beverage
- Water & wastewater

The Altivar Process 900 series is focused on maximum productivity with exceptional motor control and connectivity.

It offers special functionalities for the industrial process segments:

- Excellent motor performance on any type of motor
- Total control of any kind of coupling in master/slave applications
- Network services help ensure operation continuity even in case of connection breakdown
- Web server and data logging help reduce downtime through fast troubleshooting and preventive maintenance

Altivar Process in Foxboro Evo DCS architecture

The association of Altivar Process services with Schneider Electric process automation control systems like Foxboro Evo (for process systems) or M580 ePAC (for hybrid systems) offers a high-performance, global automation and motor control solution with optimized total cost of ownership (TCO).

The solution provides operational integrity for people, processes, and assets, with improved maintenance support to reduce downtime and help ensure operation continuity.

It offers operational insight by accessing more information to optimize the process and to control the energy efficiency.

Based on market standards (FDT/DTM, Ethernet, etc.), it is a sustainable, scalable solution that enables processes to be adapted easily and affordably.

Oil & gas applications

- Hydrocarbon production:
 - Drilling
 - Offshore and onshore extraction
 - Water treatment and re-injection
 - Crude oil storage
 - Separation
 - Pipeline pumping
 - Storage
 - Refining
 - DOF (Digital Oil Field)

Use

- PCP (Progressive Cavity Pump)
- ESP (Electrically Submersible Pump)
- Rod pump
- Mud pump
- Rotary table, top drive
- Draw works
- Regasification compressor

Process automation (continued)

Mining, minerals & metals applications

- Open-pit or underground mining
- Stockpiling/homogenization
- Concentration/mineral separation
- Solid-liquid separation
- Final handling/transport
- Clinker production
- Cement production

Use

- Long distance heavy conveying
- Bucket wheel excavator
- Special cranes:
 - Gantry cranes
 - Grab cranes
- Crushing
- Grinding mills (ball mills, SAG and AG mills)
- Spiral and magnetic separators
- Reclaimers and stackers
- Ship loaders
- Mobile miner
- Vibro feeders
- Crusher
- Long belt conveyor
- Kiln main drive
- Separator for VRM (Vertical Roller Mill)

Food & beverage applications

- Dairy beverage
- Agribusiness

Use

- Conveyors
- Mixers
- Shredders
- Centrifuges
- Hot rotary dryers

Water & wastewater applications

- Treatment plant
- Wastewater treatment

Use

- Decanter

Cooling system with two separate air flows

General presentation of the offer

Altivar Process drives can help improve equipment performance and reduce operating costs by optimizing energy consumption and user comfort.

Altivar Process drives provide a wide range of integrated functions, such as:

- Safety and automation functions that meet the requirements of the most demanding applications
- Various optional fieldbus modules available for seamless integration into the main automation architectures
- Numerous configurable I/O as standard to facilitate adaptation to specific applications
- Intuitive commissioning using the graphic display terminal
- Local and remote access and monitoring using the embedded Web server
- Energy savings and protection of the grid by means of integrated harmonic filters
- Installation EMC conformity by means of integrated EMC filters

Depending on the power range, Altivar Process is available with several mounting types and protection indices:

- Wall-mounting IP 21/UL Type 1 from 0.75 kW/1 HP to 160 kW/250 HP, ready-to-use for easy integration inside or without an enclosure in an electrical room
- Wall-mounting IP 55 from 0.75 kW/1 HP to 90 kW/125 HP, ready-to-use for easy integration in a harsh environment or in an outdoor installation close to the system to reduce the length of the motor cable (the wall-mounting IP 55 offer is available with and without a disconnect switch)
- Floor-standing IP 21 and IP 54 from 110 to 315 kW, ready-to-use with minimum dimensions for easy, optimized integration in an electrical room in a standard or harsh environment

Floor-standing drives

The floor-standing IP 21/IP 54 drive offers integrate:

- The drive power and control modules
- Semiconductor protection fuses
- Line chokes to limit THDI levels
- A filter to help protect the motor against the effects of dv/dt
- Accessible busbars to simplify the motor wiring and power wiring

The IP 54 variant is fitted with additional equipment, such as:

- A main switch with external handle
- A system for separating the cooling air flow between the power and control parts, allowing operation in a very polluted environment as well as optimum management of thermal stress in the plant room

Altivar Process drives can also be supplied as Engineered Drive System variants from 110 kW to 800 kW, developed by Schneider Electric based on customer specifications.

Rugged

Altivar Process drives are designed to adapt to the harshest environments.

- Ambient operating temperature
- Wall-mounting drives:
 - IP 21: - 15...+ 50 °C/+ 5...122 °F as standard
+ 50...60 °C/+ 122...140 °F with derating
 - IP 55: - 15...+ 40 °C/+ 5...104 °F as standard
+ 40...50 °C/+ 104...122 °F with derating
 - a patented flange-mounting kit for evacuating the dissipated heat from the power section to outside the enclosure (see page 23)
- Floor-standing IP 21/IP 54 drives:
 - 0...+ 40 °C/32...+ 104 °F as standard
 - + 40...+ 50 °C/+ 104...122 °F with derating
- Storage and transport temperature: - 40...+ 70 °C/- 40...+ 158 °F
- Operating altitude:
 - 0...1,000 m/0...3,281 ft without derating
 - 1,000...4,800 m/3,281...15,748 ft with derating of 1% per 100 m/328 ft
- Withstand to harsh environments:
 - Chemical class 3C3 conforming to IEC/EN 60721
 - Mechanical class 3S3 conforming to IEC/EN 60721
 - Electronic cards with protective coating
- Protection to suit requirements:
 - IP 21/UL type 1 for wall mounting in a plant room and in an enclosure
 - IP 55 for wall mounting, with protection against dust and water jets
 - Floor-standing IP 21
 - Floor-standing IP 54, with protection against dust and water jets

THDI $\leq 48\%$ for 80...100% load
with Altivar Process

Altivar Process drive THDI

General presentation of the offer (continued)

Energy

Altivar Process drives help to optimize power consumption by reducing the rms input current for the same load.

- Standard offer:
 - THDI $\leq 48\%$ for 80 to 100% load, which is used to maintain an optimum power factor on the most common operating range
- Low harmonic offer compatible with standard IEEE 519

Environment

The Altivar Process drive has been developed to meet the requirements of directives regarding protection of the environment and anticipate future changes in regulations:

- RoHS-2 (1)
- RECh (2) + Solution for RECh Substitute It Now (halogen-free wiring and plastics)
- PEP (Product Environmental Profile) eco-passport Program for reducing the carbon footprint and conserving raw materials
- EoLI (End of Life Instruction) (3)
- More than 70% recyclable materials (new ruling)
- Efficient energy management: 30% reduction in consumption

Electromagnetic compatibility (EMC)

Compliance with electromagnetic compatibility requirements has been incorporated into the design of the drive, which simplifies installation and provides an economical means of helping to ensure equipment meets CE marking requirements.

Altivar Process drives have a category C2 or C3 EMC filter, except ATV930...M3 and ATV930...M3C models that can be equipped with an additional filter to meet more stringent requirements (see page 46).

Installation/Maintenance

Altivar Process drives are ergonomically designed to adapt to any type of installation:

- Products, systems, or integrated in iMCC
- IP 21, UL type 1; IP 55, IP 54
- Easy installation of products and systems:
 - Cable entry equipped with Romex cable clamps to maintain an EMC connection for the power and control cable
 - Color code for connections to the removable terminal blocks on the HMI block
 - Long cable: Up to 150 m with category C3 EMC filter
- Asynchronous or synchronous motor in open loop or closed loop for 0.1...500 Hz output frequency
- Special motors: Conical sliding rotor, reluctance motor
- Lower maintenance costs due to drive's ergonomic design:
 - Fans can be replaced in less than 5 minutes
 - No maintenance tool required
 - Limited number of parts
- Embedded Web server:
 - Compatible process elements for easier implementation
 - Direct worldwide access to monitoring and maintenance functions:
 - Reading values
 - Modifying data
 - Configuring parameters
 - Changing controller status

(1) European directive 2002/95/EC Restriction Of Hazardous Substances (applicable in 2016)

(2) European regulation 1907/2006

(3) According to IEC 62635 Enhanced Guidelines

Integrated functions

Altivar Process drives include numerous advanced functions for the more complex applications in each market segment.

Advanced functions

- Performance on motor control with an overload torque up to 180% Tn in an open or closed loop
- Asynchronous, synchronous, special motors: all efficiency classes, brand independent, permanent magnet motors, torque motors, conical sliding rotor, reluctance
- Integrated EtherNet/IP and Modbus TCP dual port, cybersecurity (Achilles Level 2)
- Smart integration in PlantStruxure and Foxboro Evo process automation systems
- Optimized energy efficiency, detection of energy consumption drift of the installation
- Adaptation to the process by dedicated functions with modular design
- Embedded safety functions STO SIL3
- Master/slave and load sharing with drive-to-drive capability:
 - torque sharing on rigid coupling
 - torque sharing on elastic coupling
- Contextual access to technical documentation through dynamic QR code
- Continuous and historical real-time measurements with customizable dashboards
- Predictive maintenance (e.g.: temperatures with PT100/1000 probe, fan monitoring, etc.)

Power measurement function

Altivar Process drives integrate a power measurement function accurate to within 5%, based on measurement of the motor voltage and the power supply:

- Process drift detection for installation reliability throughout its entire service life
- Useful system performance information provided by comparing the energy used with the energy produced:
 - Typical KPIs:
 - Specific energy consumption

Users are therefore able to monitor and analyze input power, energy produced, and the KPIs directly from the drive or from the process management system.

Safety and monitoring functions

The Safety function STO and numerous monitoring functions are provided to help protect people and equipment.

- Advantages:
 - Time savings in terms of installation design and compliance
 - Fewer components and cables
 - Optimum space
 - Simplified setup of machines
 - Improved maintenance performance; limited machine intervention time and installation downtime
 - Optimized conditions for maintenance operations
- Conformity to standards EN/IEC 61508, EN/ISO 13849, IEC 61800-5-2
- Integrated STO (Safe Torque Off) function, SIL3/Plc
- Monitoring function to help protect against premature wear

Altivar Process DTM in Unity Pro

Integration

Fieldbus protocols

- EtherNet/IP and Modbus/TCP Dual port and Modbus serial link:
 - Standard Modbus and Ethernet protocols
 - Connection of configuration and runtime tools
 - Control and supervision of the Altivar Process in process architectures (controllers, SCADA, HMIs, etc.) in industrial networks (read/write data)
 - Diagnostic, supervision, and fieldbus management functions
- Ethernet services:
 - SNMP, SNTP, BootP & DHCP, IP v6, cybersecurity services, FDR
 - Open Ethernet topologies

Integration of configuration and runtime tools

- FDT/DTM technology (see page 27):
 - Drive configuration, diagnostics, and control using Unity Pro or Foxboro Evo software

Configuration and runtime tools

- Graphic display terminal (see page 24):
 - Drive control, adjustment, and configuration
 - Display of current values (motor, I/O, etc.)
 - Configuration storage and download
 - Duplication of one drive configuration on another drive from a PC or another drive
 - Remote use by means of appropriate accessories (see page 25)
 - Connection to several drives using multidrop link components (see page 25)
- Embedded web server (see page 26):
 - Easily accessible from any PC, iPhone, iPad, Android system, and major web browsers
 - Network diagnostics in real time
 - Read/write values
- SoMove software (see page 27):
 - Advanced functions for configuration, setup, and maintenance of Altivar Process drives

Integrated services

Altivar Process drives feature integrated services to achieve optimum time savings:

- Simplified communication:
 - Ethernet dual port with embedded web server
- Energy management (integrated power measurement)
- Dynamic predictive maintenance
- 3 QR codes:
 - 1: Access to the Customer Care Center application and product data sheet
 - 2: Direct access to description of the functions
 - 3: QR code generated in the event of a detected error (red screen): Identification of the detected error, probable causes and remedies

Embedded web server login screen

ATV930...N4F, ATV950...N4, ATV950...N4E, ATV930...M3

Extensive offer

The Altivar Process offer covers motor power ratings from 0.75...315 kW for three-phase voltages between 200...240 V and 380...480 V.

Three-phase power supply	Motor power	Degree of protection	Reference
200...240 V	0.75 kW...75 kW 1...100 HP	IP 21 UL type 1	ATV930U07M3...D45M3 ATV930D30M3C...D75M3C
380...480 V	0.75 kW...160 kW 1...250 HP	IP 21 UL type 1 IP 55	ATV930U07N4... D90N4 ATV930D55N4C...C16N4C ATV950U07N4...D90N4 ATV950U07N4E...D90N4E (1)
380...440 V	110 kW...315 kW	IP 21 IP 54	ATV930C11N4F...C31N4F ATV950C11N4F...C31N4F

(1) Integrated disconnect switch

Normal duty and Heavy duty modes

Altivar Process variable speed drives are designed for use in two operating modes that can optimize the drive nominal rating according to the system constraints.

These two modes are:

- Normal duty (ND): Dedicated mode for applications requiring a slight overload (up to 120%) with a motor power no higher than the drive nominal power
- Heavy duty (HD): Dedicated mode for applications requiring a significant overload (up to 150%) with a motor power no higher than the drive nominal power derated by one rating

Accessories and options

Altivar Process drives are designed to take numerous accessories and options to increase their functionality and also their capacity for integration and adaptation.

Accessories

- Drive:
- Fan kit (see page 23)
- Graphic display terminal:
- Remote mounting kit for mounting on enclosure door (see page 25)
- Multidrop connection accessories for connecting several drives to the RJ45 terminal port (see page 25)

Options

- Modules (see page 33):
- I/O extension:
 - 2 analog inputs
 - 6 digital inputs
 - 2 digital outputs
- With relay output:
 - 3 NO contacts
- Communication:
 - CANopen bus: RJ45 daisy chain, SUB-D, 5-way screw terminals
 - PROFINET bus
 - Profibus DP V1 bus
 - EtherCAT
 - DeviceNet bus
- Encoder modules (see page 32):
- Digital interface encoder module 5/12 V
- Resolver interface module
- Analog interface encoder module
- Braking units and braking resistors (see page 40)
- Passive filters (see page 44)
- Additional EMC input filters for reducing conducted emissions on the line (see page 46)
- Output filters:
 - dv/dt filters (see page 48)
 - Sinus filters (see page 49)
 - Common mode filters (see page 51)

Motor starters

Schneider Electric offers combinations of circuit breakers and contactors to be able to use Altivar Process drives in optimum conditions (see page 56). For prospective line short circuit current up to 100 kA, please contact our Customer Care Center.

Engineered Drive Systems

Altivar Process Drive Systems offer extensive flexibility for customers from different segments and for various applications.

Depending on customer requirements, several solutions are available.

Light engineered to order (Light ETO)

In the Light ETO variant, Altivar Process Drive Systems can be adapted to customer requirements easily and quickly via predefined options.

Thanks to its predefined options, the Light ETO variant allows the minimum delivery time for individually adapted enclosures, ready to connect.

The available options are:

- Increased IP 54 protection degree
- Enclosure plinth for basic device
- Additional enclosure allowing cabling from the top or from the bottom
- Enclosure lighting, heating
- "Local/remote" key switch
- Ethernet port on front door
- Digital and analog I/O modules and relay output modules
- Communication modules for various fieldbus systems
- Encoder interface modules
- STO - SIL 3 Stop category 0 or 1 emergency stop
- Front display module (FDM)
- Indicator lights on front door
- Motor/bearing temperature monitoring
- dv/dt filters for long motor cables
- Motor heating
- Circuit breaker
- Undervoltage coil for circuit breaker
- Motor for circuit breaker
- Automated mains disconnection
- Setting for 415 V + 10%
- Safety labels in the local language

Engineered to order (ETO)

The ETO variant offers, in addition to the predefined options, the possibility of implementing customer-specific adaptations in Drive Systems.

The following options are available:

- Modified wiring colors
- Remote monitoring
- Different ranges of supply voltages
- Multi-pulse supply (12-pulse)
- Design without a main switch
- Increased short-circuit strength up to 100 kA
- Air intake from the back
- Other enclosure colors
- Customized documentation and labeling
- Design for IT mains
- Motor contactor
- Seaworthy packaging

Engineered Drive System based on the
ATV960C50Q4X1 drive

Full ETO Drive System

Engineered Drive Systems (continued)

Full engineered to order (Full ETO)

With the Full ETO variant it is possible to design bespoke system solutions for the customer.

Typical design variations are:

- Multi-drive systems (several frequency inverters in the same enclosure)
- Other cooling systems
- Other enclosure types
- Other dimensions
- Etc.

For further information, please consult our Customer Care Center.

(1) Altivar Process **ATV930...M3** drives have been designed without an EMC filter. An additional filter can be added to help meet more stringent requirements and reduce electromagnetic emissions.

(2) These values are given for a nominal switching frequency of 4 kHz up to **ATV930D22M3** or 2.5 kHz for **ATV930D30M3...D45M3** and **ATV930D30M3C...D75M3C**, for use in continuous operation. The switching frequency is adjustable. Above 2.5 or 4 kHz (depending on the rating), the drive will automatically reduce the switching frequency in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see derating curves on our website www.schneider-electric.com).

(3) Typical value for the indicated motor power and for the prospective line Isc.

(4) Values given for applications requiring a slight overload (up to 120%).

(5) Values given for applications requiring a significant overload (up to 150%).

(6) The power parts are accessible at the bottom of the drive, hence the product is supplied as IP 00 for mounting in an enclosure. For IP 21 wall mounting, order the IP 21/UL Type 1 conformity kit **VW3A9704** separately.

Note: Consult the summary tables of possible drive, option, and accessory combinations (see page 28).

(1) Category C2 EMC filter for **ATV950U07N4...D45N4**. Category C3 EMC filter above **ATV950D45N4**.

(2) These values are given for an adjustable nominal switching frequency of 4 kHz up to **ATV950D45N4** or 2.5 kHz for **ATV950D55N4...D90N4**, for use in continuous operation.

Above 2.5 or 4 kHz (depending on the rating), the drive will automatically reduce the switching frequency in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current, see derating curves on our website www.schneider-electric.com.

(3) Typical value for the indicated motor power and for the prospective line Isc.

(4) Values given for applications requiring a slight overload (up to 120%).

(5) Values given for applications requiring a significant overload (up to 150%).

(6) Supplied with cable gland.

Note: Consult the summary tables of possible drive, option and accessory combinations (see page 28).

(1) Integrated motor chokes allowing a shielded motor cable length up to 300 m/984 ft in category C3 and an unshielded cable length up to 450 m/1,476 ft in category C4.

(2) Typical value for the indicated motor power and for the maximum prospective line Isc.

(3) Values given for applications requiring a slight overload (up to 120%).

(4) Values given for applications requiring a significant overload (up to 150%).

(5) RUE-2192 patented system.

Note: Consult the summary tables of possible drive, option, and accessory combinations (see page 28).

Graphic display terminal
(example shows dynamic speed and torque)

Detected fault: The screen's red backlight
is activated automatically

Embedded dynamic QR codes for contextual,
instantaneous access to online help

Scanning the QR code from a smartphone
or tablet

Instant access to online help

Graphic display terminal (supplied with the drive)

This terminal can be:

- Connected and mounted on the front of the drive
- Connected and mounted on an enclosure door using a remote mounting accessory
- Connected to a PC to exchange files via a Mini USB/USB connection (1)
- Connected to several drives in multidrop mode (see page 25)

This terminal is used to:

- Control, adjust, and configure the drive
- Display current values (motor, I/O, and process data)
- Display graphic dashboards such as the energy consumption monitoring dashboard
- Store and download configurations (several configuration files can be stored in the 16 MB memory)
- Duplicate the configuration of one powered-up drive on another powered-up drive
- Copy configurations from a PC or drive and duplicate them on another drive (the drives must be powered on for the duration of the duplication operations)

Other characteristics:

- 24 integrated languages (complete alphabets) covering the majority of countries around the world (other languages can be added; please consult our website www.schneider-electric.com)
- 2-color backlit display (white and red); if an error is detected, the red backlight is activated automatically (function can be disabled)
- Operating range: -15...50 °C/+5...122 °F
- Degree of protection: IP 65
- Trend curves: Graphic display of changes over time in monitoring variables, energy data, and process data
- Embedded dynamic QR codes for contextual, instantaneous access to online help (diagnostics and settings, etc.) using a smartphone or tablet
- Real-time clock with 10-year backup battery providing data acquisition and event timestamping even when the drive is stopped

Description

Display:

- 8 lines, 240 x 160 pixels
- Displays bar charts, gauges, and trend charts
- 4 function keys to facilitate navigation and provide contextual links for enabling functions
- "STOP/RESET" button: Local control of motor stop command/clearing detected errors
- "RUN" button: Local control of motor run command
- Navigation buttons:
 - OK button: Saves the current value (ENT)
 - Turn ±: Increases or decreases the value, goes to the next or previous line
 - "ESC" button: Aborts a value, parameter, or menu to return to the previous selection
 - Home: Root menu
 - Information (i): Contextual help

Communication accessory

Description	Reference	Weight kg/ lb
IP 20 WiFi dongle remote mounting of the Ethernet port for connection of WiFi equipment (PC, tablet, smartphone, etc.) powered by internal rechargeable battery	TCSEGWB13FA0	0.350/ 0.772

(1) Graphic display terminal used only as a handheld terminal.

Remote mounting kit for mounting graphic display terminal on enclosure door (front panel)

Remote mounting kit for graphic display terminal (rear panel)

Accessories for graphic display terminal

- Remote mounting kit for mounting on enclosure door with IP 65 degree of protection as standard

The kit comprises:

- Tightening tool (also sold separately under the reference ZB5AZ905)

1 Cover plate to maintain IP 65 protection when there is no terminal connected

2 Mounting plate

3 RJ45 port for the graphic display terminal

4 Seal

5 Fixing nut

6 Anti-rotation pin

7 RJ45 port for connecting the remote-mounting cordset (10 m/32.81 ft maximum)

Cordsets should be ordered separately depending on the length required

8 Grounding connector

Drilling a hole with a standard Ø 22 tool, as used for a pushbutton, allows the unit to be mounted without needing a cut-out in the enclosure (Ø 22.5 mm/Ø 0.89 in. drill hole).

Login screen

Customizable widgets

Drive adjustment parameters

Energy dashboard

Web server

Presentation

- The Web server can be accessed:
 - For a drive not connected to an Ethernet network
 - Via an Ethernet cable or the Schneider Electric WiFi dongle (the drive then appears as a network device)
 - For a drive connected to an Ethernet network
 - From any point on the network by entering the drive IP address
- The Web server is used for:
 - Commissioning the drive (setting configuration parameters and enabling the main functions)
 - Monitoring energy and process data, as well as drive and motor data
 - Diagnostics (drive status, file transfer, detected error and warning logs)

Description

The Web server is structured around 5 tabs.

- “My dashboard” tab:
 - Configurable using a wide choice of widgets; groups all the information and dashboards selected by the user on one page
- “Display” tab:
 - Monitors energy indicators, efficiency, and performance
 - Displays process data
 - Monitors drive parameters and status
 - Shows the I/O state and assignment
- “Diagnostics” tab:
 - Drive status
 - Time and date-stamped warning and detected error logs
 - Network diagnostics
 - Access to drive self-tests
- “Drive” tab:
 - Access to the main drive adjustment parameters with contextual help
- “Setup” tab:
 - Network configuration
 - Access management
 - Transferring and retrieving drive configurations
 - Exporting data acquisition files and logs
 - Customizing pages (colors, logos, etc.)

Other characteristics:

- Ease of connection via the RJ45 port or WiFi connection
- Password-protected authentication (modifiable password; access rights can be configured by administrator)
- No downloads or installation necessary
- Web server can be disabled
- Works in a similar way on PCs, iPhones, iPads, Android systems, and the following major web browsers:
 - Internet Explorer® (version 8 or higher)
 - Google Chrome® (version 11 or higher)
 - Mozilla Firefox® (version 4 or higher)
 - Safari® (version 5.1.7 or higher)

Altivar Process DTM in Unity

DTM

Presentation

Using FDT/DTM technology it is possible to configure, control, and diagnose Altivar Process drives directly in Unity Pro and SoMove software by means of the same software brick (DTM).

FDT/DTM technology standardizes the communication interface between field devices and host systems. The DTM contains a uniform structure for managing drive access parameters.

Specific functions of the Altivar Process DTM

- Offline or online access to drive data
- Drive firmware updates
- Transfer of configuration files from and to the drive
- Customization (dashboard, My Menu, etc.)
- Access to drive parameters and option cards
- Oscilloscope function
- Graphic interface to assist with configuration of the Altivar Process functions
- Energy and process dashboards
- Graphic display of system operation and comparison with optimum operation (dynamic speed and torque curves)
- Detected error and warning logs (with timestamping)

Advantages of the DTM library in Unity Pro:

- Single tool for configuration, setup, and diagnostics
- Network scan for automatic recognition of network configuration
- Ability to add/remove, copy/paste configuration files from other drives in the same architecture
- Single input point for all parameters shared between the ePAC (programmable controller) and the Altivar Process drive
- Creation of drive profiles for implicit communication with the ePAC as well as dedicated profiles for programs with DFBs (derived function blocks)
- Integration in the fieldbus topology
- Drive configuration is an integral part of the Unity Pro project file (STU) and the archive file (STA)

Advantages of the DTM library in SoMove:

- Drive-oriented software environment
- Wired connection to the Ethernet communication port
- Standard cable (file transfer performance)
- Function block library for Unity Pro
- Display blocks for Vijeo Citect

■ Third-party software and downloads:

The Altivar Process DTM library is a flexible, open, and interactive tool that can be used in a third-party FDT.

DTMs can be downloaded from our website www.schneider-electric.com.

SoMove software

SoMove software

Presentation

SoMove software for PC is used to configure, set up, and maintain Altivar Process drives.

In addition to the functions offered by the Web server, SoMove software features the oscilloscope function for accurate display of data samples, as well as access to multi-drive applications.

The software can be connected to Altivar Process variable speed drives via:

- A Bluetooth® wireless connection with the Bluetooth/Modbus adapter TCSWAAC13FB
- Ethernet Modbus and WiFi connection with the WiFi dongle TCSEGWB13FA0
- Ethernet Modbus TCP connection

For more information on SoMove setup software, please consult the "SoMove: Setup Software" catalog available on our website www.schneider-electric.com.

Table showing possible combinations of options for ATV930●●●M3, ATV930●●●N4 and ATV950●●●N4 drives

(1) When used with ATV950U07N4/N4E...D90N4/N4E drives, the filter must be mounted in a separate enclosure to maintain IP 55 protection for the installation.

(2) In “Normal Duty”, apply a derating of Pn-1 to the drive nominal power with a minimum switching frequency of 4 kHz. For example: an ATV630D75M3 drive with sinus filter can be used on a 55 kW motor.

(3) Maximum length of unshielded cable: 300 m. For other lengths or for shielded cables, see page 55.

VW3A3423 resolver encoder interface module

VW3A3420 digital interface encoder module 5/12 V

VW3A3422 analog interface encoder module

Presentation

Encoder interface modules are used for Flux Vector Control operation with sensor (FVC mode) for asynchronous motors, or for Vector Control operation with speed feedback (FSY mode) for synchronous motors.

They improve drive performance irrespective of the motor load state:

- Zero speed torque
- Accurate speed regulation
- Torque accuracy
- Shorter response times on a torque surge
- Improved dynamic performance in transient state

For asynchronous motors, in the other control modes (voltage vector control, voltage/frequency ratio), encoder interface modules improve static speed accuracy.

Depending on the model, encoder interface modules can also be used for monitoring, irrespective of the control type:

- Overspeed detection
- Load slipping detection

They can also transmit a reference value provided by the encoder input to the Altivar variable speed drive. This specific feature is used to synchronize the speed of several drives. The encoder options have a thermal sensor input to monitor one standard temperature sensor.

3 modules are available depending on the encoder technology:

- Resolver encoder
- Encoder with digital output
- Encoder with analog output

The Altivar variable speed drive can only be equipped with one of the encoder interface modules. The interface encoder module is inserted in a dedicated slot. It is protected against encoder supply short circuits and overloads.

I/O extension modules

Presentation

By installing I/O extension modules Altivar Process drives can be adapted to meet the needs of applications that manage additional sensors or specific sensors.

2 extension modules are available:

- Module with digital and analog I/O
- Module with relay outputs

These modules are inserted in slots A and B on Altivar Process drives:

- 1 Slot A for I/O extension or fieldbus modules
- 2 Slot B for I/O extension modules

Module with digital and analog I/O

- 2 differential analog inputs configurable via software as current (0-20 mA/4-20 mA), or for PTC, PT100, or PT1000, 2 or 3-wire
- 14-bit resolution
- 6 x 24 V $\square$ positive or negative digital inputs
- Sampling: 1 ms max
- 2 assignable digital outputs
- 2 removable spring terminal blocks

Module with relay outputs

- 3 relay outputs with NO contacts
- 1 fixed screw terminal block

I/O extension modules

Description	I/O type				Reference	Weight kg/lb
	Digital inputs	Digital outputs	Analog inputs	Relay outputs		
Module with digital and analog I/O	6	2	2 (1)	–	VW3A3203	–
Module with relay outputs	–	–	–	3 (2)	VW3A3204	–

(1) Differential analog inputs configurable via software as current (0-20 mA/4-20 mA), or for PTC, PT100, or PT1000, 2 or 3-wire. When configured as PTC probe inputs, they must never be used to protect an ATEX motor in applications in explosive atmospheres. Please refer to the ATEX guide on our website www.schneider-electric.com.

(2) NO contacts.

Note: Digital and analog I/O modules and relay output modules can go in either slot A or slot B on Altivar Process drives.

However, the drives cannot take 2 modules of the same type (e.g., 2 digital and analog I/O modules or 2 relay output modules).

Presentation

Altivar Process drives have 3 built-in RJ45 communication ports as standard:

- 1 EtherNet/IP and Modbus TCP dual port
- 1 serial port

Integrated communication protocols

Altivar Process drives integrate the EtherNet/IP and Modbus TCP and Modbus serial link communication protocols as standard.

■ EtherNet/IP and Modbus TCP dual port

This offers standard services regularly used in industrial networks: Connection to the Modbus TCP or EtherNet/IP network

- EtherNet IP adapter including standard CIP objects (AC/DC drive objects, CIP energy objects, etc.), compliant to ODVA specification
- The RSTP connection allows ring topology to help ensure continuity of service.
- Dual port allows daisy chain connection to simplify cabling and network infrastructure (no need to use a switch).
- Modbus TCP message handling is based on the Modbus protocol and is used to exchange process data with other network devices (e.g., a PLC). It provides Altivar Process drives with access to the Modbus protocol and to the high performance of the Ethernet network, which is the communication standard for numerous devices.
- SNMP (Simple Network Management Protocol) offers standard diagnostics services for network management tools.
- The FDR (Fast Device Replacement) service allows automatic reconfiguration of a new device installed to replace an existing device.
- Device security is reinforced by disabling some unused services as well as managing a list of authorized devices.
- Setup and adjustment tools (SoMove, Unity with DTM) can be connected locally or remotely.
- The embedded Web server is used to display operating data and dashboards as well as to configure and diagnose system elements from any web browser.

These numerous services offered by Altivar Process drives simplify integration into Schneider Electric process automation control systems like M580 ePAC or Foxboro Evo DCS.

■ Serial port

- Field network operation for exchanging data with other devices via the Modbus protocol
- Multidrop connection of the following HMIs and configuration tools:
 - The graphic display terminal supplied with the drive
 - A Magelis industrial HMI terminal
 - A PC with SoMove or Unity setup software

The detailed specifications for the EtherNet/IP or serial communication ports, and the Modbus and Modbus TCP protocols are available on our website www.schneider-electric.com.

Description

- 1 2 x RJ45 EtherNet/IP and Modbus TCP port
- 2 RJ45 serial port
- 3 Slot A for I/O extension or fieldbus modules
- 4 Slot B for I/O extension modules
- 5 Removable screw terminal blocks for 24 V $\square$ power supply and integrated I/O
- 6 RJ45 serial link for HMI (graphic display terminal, Magelis terminal, etc.)

Altivar Process drives can only take one fieldbus module, in slot A **3** only. They cannot take 2 modules of the same type (e.g., 2 digital and analog I/O modules or 2 relay output modules).

The drives can take one digital and analog I/O module and one relay output module in either slot A **3** or slot B **4**.

Note: The user manuals and description files (gsd, eds) for devices on the fieldbuses and networks are available on our website www.schneider-electric.com.

PF151298B

Optional fieldbus modules

The Altivar Process drive can also be connected to other industrial fieldbuses and networks by using one of the fieldbus modules available as an option. Fieldbus modules are supplied in “cassette” format for ease of mounting/removal.

Dedicated fieldbus modules:

- CANopen:
- RJ45 Daisy Chain
- Sub-D
- Screw terminal block
- EtherCAT
- PROFINET
- PROFIBUS DP V1
- DeviceNet

PROFINET and PROFIBUS DP V1 modules also support the Profidrive and CiA402 profiles.

It is possible to maintain communication using a separate power supply for the control and power sections. Monitoring and diagnostics via the network are possible even if there is no power supplied to the power section.

Functions

The drive functions can be accessed via the various communication networks:

- Configuration
- Adjustment
- Control
- Monitoring

Altivar Process drives offer a high degree of interfacing flexibility with the possibility to assign, by configuration, the different control sources (I/O, communication networks, and HMI terminal) to control functions in order to meet the requirements of complex applications.

Network services and parameters are configured using the SoMove drive setup software, or using Unity software if the drive is being integrated into a PlantStruXure architecture.

Communication is monitored according to the specific criteria for each protocol. However, regardless of the protocol, it is possible to configure how the drive responds to a detected communication interruption, as follows:

- Define the type of stop when a communication interruption is detected
- Maintain last command received
- Fallback position at preset speed
- Ignore the detected communication interruption

(2) Only straight connectors are compatible with Altivar Process drives.

Presentation

Braking units allow Altivar Process drives to operate while braking to a standstill or during "generator" operation, by dissipating the energy in the braking resistor.

ATV930U07M3...D45M3, ATV930U07N4...D90N4 and ATV950U07N4...D90N4 drives have a built-in dynamic brake transistor.

For ATV930D55M3C...D75M3C and ATV930C11N4C...C16N4C drives, a braking unit must be used.

Braking units provide IP 20 protection. Thermal monitoring is given by an integrated temperature probe.

Applications

High-inertia machines, machines with slow and fast cycles, high-power machines performing vertical movements.

Presentation

VW3A7741

Braking resistors allow Altivar Process drives to operate while braking to a standstill, by dissipating the braking energy. They enable maximum transient braking torque.

Braking resistors are designed to be located outside the enclosure, but should not inhibit natural cooling. Air inlets and outlets must not be obstructed in any way. The air must be free of dust, corrosive gas, and condensation.

Several resistor models are available, depending on the drive rating:

- With IP 20 and IP 23 casing and thermal monitoring provided by temperature-controlled switch or by the drive

The internal circuits of Altivar Process drives rated 90 kW/125 HP or less have a built-in dynamic brake transistor.

An external braking unit is necessary for wall-mounting Altivar Process drives between 110 kW/150 HP and 160 kW/250 HP at 400...480 V as well as 55 kW/75 HP and 75 kW/100 HP at 200...240 V.

Applications

Braking resistors are designed for a defined cycle (see the 3 cycle types defined below).

Depending on your own applications and cycles, you can use these resistors or define a new value.

- Braking resistors for light braking cycles for machines with cycles and inertia. The braking power is limited to 1.5 Tn for 0.8 s every 40 s.
- Braking resistors for medium braking cycles for machines with high inertia and conveyors. The braking power is limited to 1.35 Tn for 4 s every 40 s.
- Braking resistors for severe braking cycles for machines with very high inertia and vertical movements (hoisting). The braking power is limited to 1.65 Tn for 6 s and Tn for 54 s every 120 s.

Light Cycle

$t = 40 \text{ s}$
 $t_1 = 0 \text{ s}$
 $t_2 = 0.8 \text{ s}$
 $T_{n1} = 0$
 $T_{n2} = 1.5 \times T_n$

t : period
 T_{n1} : braking torque
 T_{n2} : braking torque
 T_n : nominal torque

(1) Load factor for resistors: The value of the average power that can be dissipated at 50 °C/122 °F from the resistor into the casing is determined for a load factor during braking that corresponds to the majority of normal applications:

- Normal duty: 0.8 s braking with a 1.2 Tn braking torque for a 40 s cycle
- Heavy duty: 0.8 s braking with a 1.5 Tn braking torque for a 40 s cycle

Medium Cycle

$t = 40 \text{ s}$
 $t1 = 0 \text{ s}$
 $t2 = 4 \text{ s}$
 $Tn1 = 0$
 $Tn2 = 1.35 \times Tn$

t : period
 $Tn1$: braking torque
 $Tn2$: braking torque
 Tn : nominal torque

Presentation

Passive filters are used to obtain total harmonic distortion of less than 10% or 5%.

Reactive power increases at no load or low load. To help reduce this reactive power, the filter capacitors can be disconnected (see the diagrams on our website www.schneider-electric.com).

Passive filters provide IP 20 protection.

Applications

Reduction of current harmonics in order to use drives in the first environment (restricted distribution, domestic applications, sale conditional on the competence of the user and the distributor in terms of reducing current harmonics).

Passive filters: 400 V 50 Hz three-phase supply

Altivar Process drive with integrated EMC filter

Altivar Process drive with additional EMC filter

Integrated EMC filters

Altivar Process drives (except ATV930...M3/M3C) have integrated radio interference input filters in accordance with the EMC standard for variable speed electrical power drive "products" IEC/EN 61800-3, edition 2, category C2 or C3 in environment 1 or 2, and to comply with the European EMC (electromagnetic compatibility) directive.

The integrated EMC filter runs off the leakage current to ground. The leakage current can be reduced by disconnecting the filter capacitors (please refer to the installation guide on our website www.schneider-electric.com). In this configuration, the product does not comply with the European EMC directive.

Additional EMC input filters

Additional EMC input filters can be used to meet more stringent requirements and are designed to reduce conducted emissions on the line supply below the limits of standard IEC/EN 61800-3 category C1, C2 or C3.

Use according to the type of line supply

Use of these additional filters is only possible on TN (neutral connection) and TT (grounded neutral) type systems.

Standard IEC/EN 61800-3, appendix D2.1, states that on IT systems (isolated or impedance grounded neutral), filters can cause permanent insulation monitors to operate in a random manner.

If a machine needs to be installed on an IT system, one solution is to insert an isolation transformer and connect the machine locally to a TN or TT system.

Altivar Process drive with dv/dt filter

Presentation

Altivar Process drives operate with the following maximum motor cable lengths: 150 m/492 ft for shielded cables and 300 m/984 ft for unshielded cables.

The output voltage delivered by a drive based on PWM (Pulse Width Modulation) is a series of pulses.

When applied to the motor, unexpected phenomena occur, such as overvoltages across the motor windings and high frequency currents flowing through the leakage capacitors of the cable and windings.

To limit overvoltages in the motor, it is recommended, for cables longer than 50 m/164 ft, that you check the motor insulation type and add an output filter if necessary.

For further information, please consult the White Paper "An Improved Approach for Connecting VSD and Electric Motors" available on our website www.schneider-electric.com.

Output filters are used to limit dv/dt at the motor terminals to 500 V/μs maximum.

Output filters are designed to limit overvoltages at the motor terminals to less than:

- 800 V with a shielded cable 0 to 50 m (0 to 164 ft) long, with a 400 V supply voltage
- 1,000 V with a shielded cable 50 to 150 m (164 to 492 ft) long, with a 400 V supply voltage
- 1,500 V with a shielded cable 150 to 300 m (492 to 984 ft) long, with a 400 V supply voltage (up to 500 m (1,640 ft) with an unshielded cable)

They are also used to:

- Limit overvoltages at the motor terminals
- Filter interference caused by opening a contactor placed between the filter and the motor

The performance of dv/dt filters will be affected if the maximum cable lengths are exceeded. For an application with several motors connected in parallel, the cable length must include all cabling. If a cable longer than that recommended is used, the dv/dt filters may overheat.

The switching frequency must be under 8 kHz.

Altivar Process drive with sinus filter

Presentation

Sinus filters allow Altivar Process drives to operate with long motor cables:

- 500 m (1,640 ft) with a shielded cable
- 1,000 m (3,280 ft) with an unshielded cable

The minimum switching frequency at which sinus filters can operate is 4 kHz. This is the default value when the sinus filter function is activated on the variable speed drive (please refer to the programming guide on our website www.schneider-electric.com).

The output frequency must be less than 100 Hz.

At 100% load, the voltage drop is less than 8% with output frequency 50 Hz and switching frequency 4 kHz.

Applications

For applications requiring:

- Long cable runs
- Motors connected in parallel
- Submersible pumps sensitive to dv/dt
- An intermediate transformer between the drive and the motor

(1) The filters are designed to operate in a switching frequency range of between 4 and 8 kHz.

(2) In "Normal duty", apply a derating of Pn-1 to the drive nominal power with a minimum switching frequency of 4 kHz.

For example: An ATV930D75M3C drive with sinus filter can be used on a 55 kW motor.

IP 21 protection kit for IP 20 filters

Description	For sinus filter	Reference	Weight kg/ lb
Mechanical kit including cover and cable clamps	VW3A5401	VW3A53901	1.000/ 2.205
	VW3A5402		
	VW3A5403	VW3A53902	1.300/ 2.866
	VW3A5404	VW3A53903	2.700/ 5.952
	VW3A5405	VW3A53904	3.200/ 7.055

(1) The filters are designed to operate in a switching frequency range of between 4 and 8 kHz.

(2) When used with **ATV950U07N4/N4E...D90N4/N4E** drives, the filter must be mounted in a separate enclosure to maintain IP 55 protection for the installation.

(3) In "Normal Duty", apply a derating of Pn-1 to the drive nominal power with a minimum switching frequency of 4 kHz. For example:

An ATV930C13N4C drive with sinus filter can be used on a 110 kW motor.

An ATV930C16N4C drive with sinus filter can be used on a 132 kW motor.

Altivar Process ATV900 drive with common mode filter

Presentation

Sinus filters or dv/dt filters reduce the overvoltage across windings and high frequency currents in differential mode. But they have no effect on the common mode current between phases and the cable shielding, and between the windings and the stator/rotor of the motor.

Common mode filters bring several benefits:

- Reduction of RFI (Radio Frequency Interference) of the motor cable and improvement of the effectiveness of the EMC filter for conducted emissions
- Reduction of the high frequency currents circulating in the bearings of the motor and prevention of their damage.

It is possible to use the common mode filter at the output terminals of the drive, the dv/dt filter, or the sinus filter.

Note: The selection of a common mode configuration depends on the type and length of motor cable. An abnormal increase of the temperature indicates a possible saturation. Additional filters shall be used to avoid it.

Applications

Circuit breaker/contactor/drive combinations help to ensure continuity of service in the installation.

The type of circuit breaker/contactor coordination selected can reduce maintenance costs in the event of a short-circuit on the drive input by minimizing the time required to make the necessary repairs and the cost of replacement equipment. The suggested combinations provide coordination according to the drive rating.

The drive controls the motor, provides a monitoring function against short-circuits between the drive and the motor, and helps protect the motor cable against overloads. Overload monitoring is provided by the drive's motor thermal monitoring function if this has been enabled. Otherwise, an external monitoring device such as a probe or thermal overload relay should be provided.

The circuit breaker helps protect the drive's power cables against short-circuits.

Variable speed drives

Altivar Process ATV900

High Performance Drive Systems

ATV960C31Q4X1

Cooling concept

Presentation

Concept

The ATV960 High Performance Drive Systems range offers standard enclosures ready to connect.

The modular system concept with more than 80 selectable options makes it possible to adapt the enclosure unit optimally to individual requirements.

The fully-tested, ready-to-connect enclosure allows quick installation and commissioning of the drive.

Power versus overload

For optimum adaptation to the application you can choose between two overload modes:

- Normal duty: High continuous power with an overload capability of 20% (for compressors, displacement pumps, blowers, etc.)
- Heavy duty: Reduced continuous power with an increased overload capability of 50% for 60 s for drives with enhanced requirements regarding overload capability, starting torque, load impacts, and control performance (such as mixers, crushers, mills, conveyors, etc.)

Standard equipment

The standard equipment contains frequency inverter modules, semiconductor fuses, a main switch, a line reactor to reduce the harmonics, a dv/dt filter choke (from 355 kW) to help protect the motor, and spacious mains and motor bars for connecting the power cables.

The design is based on the standard enclosure system "Spacial SF" with a graphic operating panel integrated into the enclosure door.

Compact dimensions

The control is located on a spacious control panel. It has compact dimensions, nevertheless there is enough space for additional extensions and accessibility in case of maintenance.

Device features

High motor performance

Optimum control over the motor in each operating state due to the new motor control method of the ATV960 High Performance Drive Systems.

- Asynchronous motors (all efficiency classes, high number of poles)
- Synchronous motors (PM motors, torque motors, reluctance motors)
- Special motors for submersible pumps

Extended connectivity

Integrated Dual Ethernet as standard provides increased redundancy and supports RSTP (Rapid Spanning Tree Protocol).

Dynamic drive-to-drive communication for multi-motor drives with master/slave groups and optimum load sharing between all motors.

Cooling concept

The power section components are cooled in a separate cooling air channel. About 90% of the heat losses are evacuated via this channel. The inside of the enclosure is cooled via fans in the enclosure door.

When using the "IP 54 increased protection degree" option, the separate air supply for the power section comes through the enclosure plinth.

Variable speed drives Altivar Process ATV900 High Performance Drive Systems

IP 23 enclosure

Protection degrees

The standard design of Altivar Process High Performance Drive Systems complies with the IP 23 protection degree. This solution provides optimum cooling of the built-in frequency inverter modules and power components as well as maximum compactness.

For operation in harsh ambient conditions, the increased IP 54 protection degree is available as an option. This solution consists of a clearly specified and tested cooling system with a separate cooling air channel which provides excellent reliability.

About 90% of the heat losses are evacuated via the separate cooling air channel. The inside of the enclosure is cooled via fans located in the enclosure door.

Standard IP 23 enclosure design

In order to avoid internal air short-circuits, the power sections of the components are located in the main cooling air channel.

The cooling air intake comes from a grid located in the bottom of the enclosure door. The internal fan, which is in a separate air channel, provides cooling of the power section. The air then comes out through the top of the enclosure.

The heat losses from the control section are evacuated by a fan in the enclosure door.

The incoming air temperature must be between 0 °C/32 °F and 40 °C/104 °F (-10 °C/14 °F with enclosure heating) and can reach +50 °C/122 °F with derating (class 3K3 according to IEC/EN 60721-3-3).

IP 23 enclosures comprise:

- 1 An air intake (without filter mat) via a grid on the bottom of the enclosure door
- 2 A line reactor
- 3 Fans for the power section
- 4 A rectifier module
- 5 An inverter module
- 6 A dv/dt filter choke
- 7 An air outlet via a metal cover with protection against water splashes on the enclosure roof
- 8 An air outlet (without filter mat) with fans for the control section

Increased IP 54 protection degree

With the increased IP 54 protection degree with separate channels, the cooling air intake comes from the floor and goes out through the enclosure roof.

The control section is cooled by filter fans located in the enclosure door.

The incoming air temperature must be between 0 °C/32 °F and 40 °C/104 °F (-10 °C/14 °F with enclosure heating) and can reach +50 °C/122 °F with derating (class 3K3 according to IEC/EN 60721-3-3).

IP 54 enclosures comprise:

- 9 An air intake for the power section via the enclosure plinth
- 10 A line reactor
- 11 Fans for the power section
- 12 A rectifier module
- 13 An inverter module
- 14 A dv/dt filter choke
- 15 An air outlet via a metal cover with protection against water splashes on the enclosure roof
- 16 An air outlet (with filter mat) with fans for the control section
- 17 An air intake grid (with filter mat) for the control section

IP 54 enclosure

Variable speed drives

Altivar Process ATV900

High Performance Drive Systems

Additional enclosure allowing cabling from the bottom

Modular offer

This consists of:

- The standard High Performance offer
- One or more options (see pages 70 to 73)

Options (Light ETO)

Some of these options depend on the drive rating. They can be integrated without any need for modifications to the enclosure:

- Increased IP 54 protection degree
- Enclosure plinth
- Additional enclosure allowing cabling from the top or from the bottom
- Enclosure lighting, heating
- "Local/remote" key switch
- Ethernet port on front door
- Discrete and analog I/O modules and relay output module
- Communication modules for various fieldbus systems
- Encoder interface modules
- STO - SIL 3 Stop category 0 or 1
- Indicator lights on front door
- Motor/bearing temperature monitoring
- dv/dt filters for long motor cables
- Motor heating
- Circuit breaker
- Undervoltage coil for circuit breaker ~ 230 V
- Motor for circuit breaker ~ 230 V
- Automatic mains disconnection via a circuit breaker
- Setting for 415 V + 10%
- Safety labels in the local language

Further design variations (ETO)

These options depend on the drive rating. Some may lead to modification of the size of the enclosure:

- Different ranges of supply voltages
- Multipulse supply (12-pulse)
- Design without a main switch
- Increased short-circuit strength (100 kA)
- Air intake from the back
- Other enclosure colors
- Customized documentation and labeling
- Reinforced or seaworthy packaging
- Design for IT mains
- Motor contactor
- Remote monitoring
- Etc.

(1) These values are given for a nominal switching frequency of 2.5 kHz for use in continuous operation.

The switching frequency is adjustable from 2...8 kHz for all ratings.

Above 2.5 kHz, the drive will automatically reduce the switching frequency in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see the derating curves on our website www.schneider-electric.com).

(2) Typical value for the indicated motor power and for the maximum prospective line Isc.

(3) Values given for applications requiring a slight overload (up to 120%).

(4) Values given for applications requiring a significant overload (up to 150% for 60 s).

Note: Consult the summary tables of possible drive, option, and accessory combinations (see page 70).

Variable speed drives Altivar Process ATV900 Regenerative Drive Systems

ATV980C16Q4X1

4-quadrant technology

3-level technology

Presentation

Concept

The ATV980 Regenerative Drive Systems help improve the efficiency by feeding back the drive energy to the mains.

Schneider Electric has developed a concept based on a 3-level technology that reduces the total current distortion factor (THDI) to a value below 5% and allows the full energy flow in both directions at the same time.

During the development of the enclosure system, special attention was paid to make installation and operation simple. The result is a ready-to-connect enclosure for drives for which generator operating states can occur. This provides a 4-quadrant drive solution with shock-free changes from motor operation to generator operation.

The modular system concept with more than 80 selectable options makes it possible to adapt the enclosure unit to individual requirements. The fully-tested, ready-to-connect enclosure allows quick installation and commissioning of the drive.

Standard equipment

The standard Regenerative offer contains active infeed modules as well as frequency inverter modules, filter components, semiconductor fuses, a main switch, a dv/dt filter choke (from 160 kW) helping to protect the motor, and spacious mains and motor bars for connecting the power cables.

The design is based on the ready-assembled Sarel "Spacial SF" enclosures with a graphic operating panel integrated in the enclosure door.

Inside the enclosure there is a spaciouly designed control panel with the control components. It has compact dimensions, nevertheless there is enough space for additional extensions and accessibility for maintenance.

Device features

Simple use

ATV980 drives pilot and stop each motor without any additional effort. This 4-quadrant (4Q) technology is an ideal solution for drives for which generator operating states can occur. This avoids having complex multi-drive solutions.

Energy savings by highly efficient power regeneration

The 3-level technology inside the active mains rectifier and the dynamically adapted DC link voltage help ensure an efficient flow of energy to and from the mains. ATV980 Drive Systems therefore help save electrical energy.

Reduced load of the mains 3-level concept

In comparison with the classic circuit structure of active mains rectifiers, the 3-level technology allows the switching frequency to increase and the current load to be reduced at the same time.

This new technology achieves a total distortion factor (THDI) below 2% and thus fulfills the requirements of the IEEE 519 standard. The THDI is below 5% for distorted mains.

Additionally, the cosinus Phi is equal to 1 in each load situation, helping to reduce the the load on the mains.

Variable speed drives

Altivar Process ATV900

Regenerative Drive Systems

IP 23 enclosure

Protection degrees

The standard design of the Altivar Process Regenerative Drive Systems complies with the IP 23 protection degree. This solution provides optimal cooling of the built-in frequency inverter modules and power components as well as maximum compactness.

For operation with rough ambient conditions, the increased IP 54 protection degree is available as an option. This solution consists of a clearly specified and tested cooling system with a separate cooling air channel which provides good reliability.

About 90% of the heat losses are exhausted evacuated via the separate cooling air channel. The inside of the enclosure is cooled via fans located in the enclosure door.

Standard IP 23 enclosure design

In order to avoid internal air short-circuits, the power parts of the components are located in the main cooling air channel.

The cooling air intake comes from a grid located in the lower area of the enclosure door. The internal fan, which is in a separated air channel, provides the cooling of the power part. The air then comes out through the top of the enclosure.

The heat losses of the control part are exhausted by a fan in the enclosure door.

The incoming air temperature must be between 0 °C/32 °F and 40 °C/104 °F (-10 °C/14 °F with enclosure heating) and may reach +50 °C/122 °F with derating (class 3K3 according to IEC/EN 60721-3-3).

IP 23 enclosures comprise:

- 1 An air intake (without filter mat) via a grid on the lower part of the enclosure door
- 2 Filter components
- 3 Fans for the power part
- 4 An Active Front End module
- 5 A dv/dt filter choke
- 6 An air outlet via a metal cover with protection against water splashes on the enclosure roof
- 7 An air outlet (without filter mat) with fans for the control part

IP 54 enclosure

Increased IP 54 protection degree

With the increase IP 54 protection degree with separate channels the cooling air intake comes from the floor and goes out through the enclosure roof.

The control part is cooled by filter fans located in the enclosure door.

The incoming air temperature must be between 0 °C/32 °F and 40 °C/104 °F (-10 °C/14 °F with enclosure heating) and may reach +50 °C/122 °F with derating (class 3K3 according to IEC/EN 60721-3-3).

IP 54 enclosures comprise:

- 8 An air intake for the power part via the enclosure plinth
- 9 Filter components
- 10 Fans for the power part
- 11 An Active Front End module
- 12 A dv/dt filter choke
- 13 An air outlet via a metal cover with protection against water splashes on the enclosure roof
- 14 An air outlet (with filter mat) with fans for the control part
- 15 An air intake grid (with filter mat) for the control part

Enclosure heating

- One or more options (see pages 70 to 73)

Options (Light ETO)

Some of these options depend on the drive rating. They can be integrated without any need for modifications to the enclosure:

- Increased IP 54 protection degree
- Enclosure plinth
- Additional enclosure allowing cabling from the top or from the bottom
- Enclosure lighting, heating
- "Local/remote" key switch
- Ethernet port on front door
- Discrete and analog I/O modules and relay output module
- Communication modules for various fieldbus systems
- Encoder interface modules
- STO - SIL 3 Stop category 0 or 1
- Indicator lights on front door
- Motor/bearing temperature monitoring
- dv/dt filters for long motor cables
- Motor heating
- Circuit breaker
- Undervoltage coil for circuit breaker ~ 230 V
- Motor for circuit breaker ~ 230 V
- Automatic mains disconnection via a circuit breaker
- Setting for 415 V + 10%
- Safety labels in the local language

Further design variations (ETO)

These options depend on the drive rating. Some may lead to modification of the size of the enclosure:

- Different ranges of supply voltages
- Multipulse supply (12-pulse)
- Design without a main switch
- Increased short-circuit strength (100 kA)
- Air intake from the back
- Other enclosure colors
- Customized documentation and labeling
- Stronger or seaworthy packaging
- Design for IT mains
- Motor contactor
- Remote monitoring
- Etc.

(1) These values are given for a nominal switching frequency of 2.5 kHz for use in continuous operation.

The switching frequency is adjustable from 2...8 kHz for all ratings.

Above 2.5 kHz, the drive will automatically reduce the switching frequency in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see the derating curves on our website www.schneider-electric.com).

(2) Typical value for the indicated motor power and for the maximum prospective line Isc.

(3) Values given for applications requiring a slight overload (up to 120%).

(4) Values given for applications requiring a significant overload (up to 150% for 60 s).

Note: Consult the summary tables of possible drive, option, and accessory combinations (see page 70).

Altivar Process

A whole world of Services for your Drives by Schneider Electric

Presentation

Schneider Electric offers an extensive range of support services to help ensure the reliability of your installation in the long term, control your maintenance costs, and keep your process running at peak performance for maximum efficiency. Altivar Process has been designed in harmony with a whole range of services offered by Schneider Electric.

A worldwide network, 24/7:

- 400 highly qualified and certified experts
- Field service engineers, online experts

A digital world of Services:

- "Schneider Electric Customer Care" app
- Remote technical support

People			Digitized support material
Spare parts			Service provisions

A dedicated supply chain:

- All the spare parts you need
- Designed and manufactured by Schneider Electric

An optimal life cycle model:

- Spare parts management, Exchange and Repairs
- Extended warranties, Maintenance plans

Schneider Electric drive maintenance expert certification

- A worldwide network, 24/7:
- 400 highly qualified and certified experts
 - Our Field Service Engineers follow a proven Drives certification program designed to support you with maximum expertise and efficiency.
 - For fast, in-depth diagnostics and repairs, they are equipped with professional tools and software.

	Repair Centers	Low Voltage (LV) Drives field service engineers	Medium Voltage (MV) Drives field service engineers
Module A	LV drive safety training		MV drive safety training
Module B	Technical training for LV drives		Technical training for MV drives
Module C	Repair center audit	Skills assessment	On-site start-up
Module D	Certification procedure		
Module E	Registration in Schneider Electric's international directory of Drives skills		
Module F	Re-certification every 2 years

Altivar Process

A whole world of Services for your Drives by Schneider Electric

Schneider Electric drive life cycle policy

- The Schneider Electric drive life cycle model provides optimum support.
 - It is divided into 4 phases : Active, Phase out, Service, Limited
- The total Schneider Electric drive life cycle lasts more than 20 years.
 - Full maintainability: during Active, Phase out and Service periods
 - Optimized performance: during Active, Phase out and Service periods
 - Upgradability: during the Active period
 - Managed transition to new technology: during Phase out and Service periods

Altivar Process

A whole world of Services for your Drives by Schneider Electric

Drives support and services offer by Schneider Electric (continued)

Schneider Electric has developed a generic Services offer to assist you throughout the life cycle of your product. From the Design to Renew phase, whether for standard or critical operations, you'll find the solution you need in our set of standardized offers.

The offer	Contact, How to order	Description
Solutions for Schneider Electric drives	Contact your center local service Schneider Electric	Our Schneider Electric experts can help you design your installation, offering whatever type of assistance you need from technical support to "turnkey" solutions.
Initial warranty	Included	When you register your drive, Schneider Electric will extend your initial warranty period by 6 months. Let's stay connected: registering allows Schneider Electric to keep you informed about recent innovations and propose Services to optimize your performance.
Start-up - Commissioning	Contact your center local service Schneider Electric	Our team of experts are specialists in installation commissioning and start-up whatever the conditions and for any application. This will extend your warranty period by an extra 6 months.
Spare parts - Spare parts management	Contact your center local service Schneider Electric	Our spare parts are available for the full life time of your equipment. They are designed and manufactured to the same high quality standards as our products. They are available via a dedicated supply chain for emergency shipments. Our team can help you identify critical parts and define the right level of the required stock. Whether stored in your premises (on-site) or in a central store (off-site), it's reassuring to know that critical spare parts are available 24/7.
Exchange and repairs	Contact your center local service Schneider Electric	Schneider Electric offers high-quality repair services via a global network of certified Repair Centers and certified Field Service Engineers to cover any need: repairs in Schneider Electric repair centers or exchanges with refurbished products, or on-site repairs (Schneider Electric intervention on your premises).

Altivar Process

A whole world of Services for your Drives by Schneider Electric

Drives support and services offer by Schneider Electric (continued)		
The offer	Contact, How to order	Description
Remote technical support	Contact your center local service Schneider Electric	Direct priority access to our experts to help you solve any technical difficulties. Our experts have extensive field experience and have fully mastered the technologies implemented. A simple phone conversation or on-line chat support are usually sufficient to help you find the best solution and can reduce your costs by avoiding on-site intervention.
On-site technical support	Contact your center local service Schneider Electric	Our field service engineers can support your maintenance staff in their everyday operations, or engage when requested in the event of an emergency.
Extended warranty	Contact your center local service Schneider Electric	Spare parts and repairs performed by Schneider Electric experts on duty.
Advantage service plan	Contact your center local service Schneider Electric	The Advantage Service plan combines the Preventive Maintenance program (annual visit for inspection, checks and replacement of worn parts) with the extended warranty (covering spare parts and repairs), plus remote technical support.
Drives training	Contact your center local service Schneider Electric	A full set of training courses to master your Altivar Process drive at any stage in the life cycle of your installation.
"Schneider Electric Customer Care" app	Download from the Apple Store® or Google Play Store™	Free download from the Apple Store® or Google Play Store™. Immediate access to Schneider Electric Customer Care Centers, product documentation, FAQs, Cloud services, etc. and plenty of other services yet to come.
