

2D Profile Measuring Sensors

ZG2 - Smart Profile Sensor

The easy way to get your profile

- Easy to use - intuitive user interface
- Live - built-in LCD monitor for setup and immediate profile display
- Versatile - 18 measurement tools
- Accurate - 10 μ m resolution
- Wide profiles - up to 70 mm
- Fast - 5 ms sampling time
- Smart - powerful PC software for configuration and post-processing (optional)

System configuration

27 m max.

Sensor Head Extension Cables

Highly-flexible extension cables of four different lengths are available. The distance between the sensor head and sensor controller can be extended up to 27 m without delaying image input periods.

Note: 1. Obtained by setting an OMRON standard measurement object at the measurement center distance and determining the average height of the beam line. The conditions are given in the table below. However, satisfactory resolution cannot be attained in strong electromagnetic fields. The minimum resolution of the ZG2-WDS8T/WDS3VT is 0.25 µm, even when the average number of operations is increased. Resolution does not go any lower.

Model	CCD Mode	Average No. of Operations	Measurement object	
			Regular reflective	Diffuse reflective
ZG2-WDS8T/ ZG2-WDS22/ ZG2-WDS70	High-precision mode	64	OMRON standard white alumina ceramic object	
ZG2-WDS3T			OMRON standard mirrored object	OMRON standard diffuse reflective object

2. The tolerance for and ideal straight line obtained by determining the average height of and OMRON standard measurement object for the beam line. The CCD high-resolution mode is used. Linearity varies depending on the measurement object.

Model	Measurement object	
	Regular reflective	Diffuse reflective
ZG2-WDS8T/ WDS22/WDS70	OMRON standard white alumina ceramic object	
ZG-WDS3T	OMRON standard mirrored object	OMRON standard diffuse reflective object

3. A value attained by using an aluminum jig to secure the distance between the Sensor Head and the measurement object. The CCD standard mode is used.

4. Defined as $1/e^2$ (13.5%) of the center light intensity. This may be influenced when light leakage also exists outside the defined area and the reflectivity of the light around the measurement object is higher than that of measurement object.

Note: 1. The controller link unit is necessary for linking.

2. Data is saved in the memory of the main unit during logging. The data is automatically saved in a memory card after logging is completed. The maximum number of logging differs according to set conditions. For details, refer to the Users Manual.

3. Measurement values for 65,000 measurements can be saved even when two sensor controllers are connected and each performs eight tasks.

4. The value is the maximum number achieved in the following conditions.

- One sensor controller performs one measurement task.
- Either profiles or measurement values are logged.
